Add configuration for sending Emails to multiple recipients

ENHANCEMENTS - Week 1-2

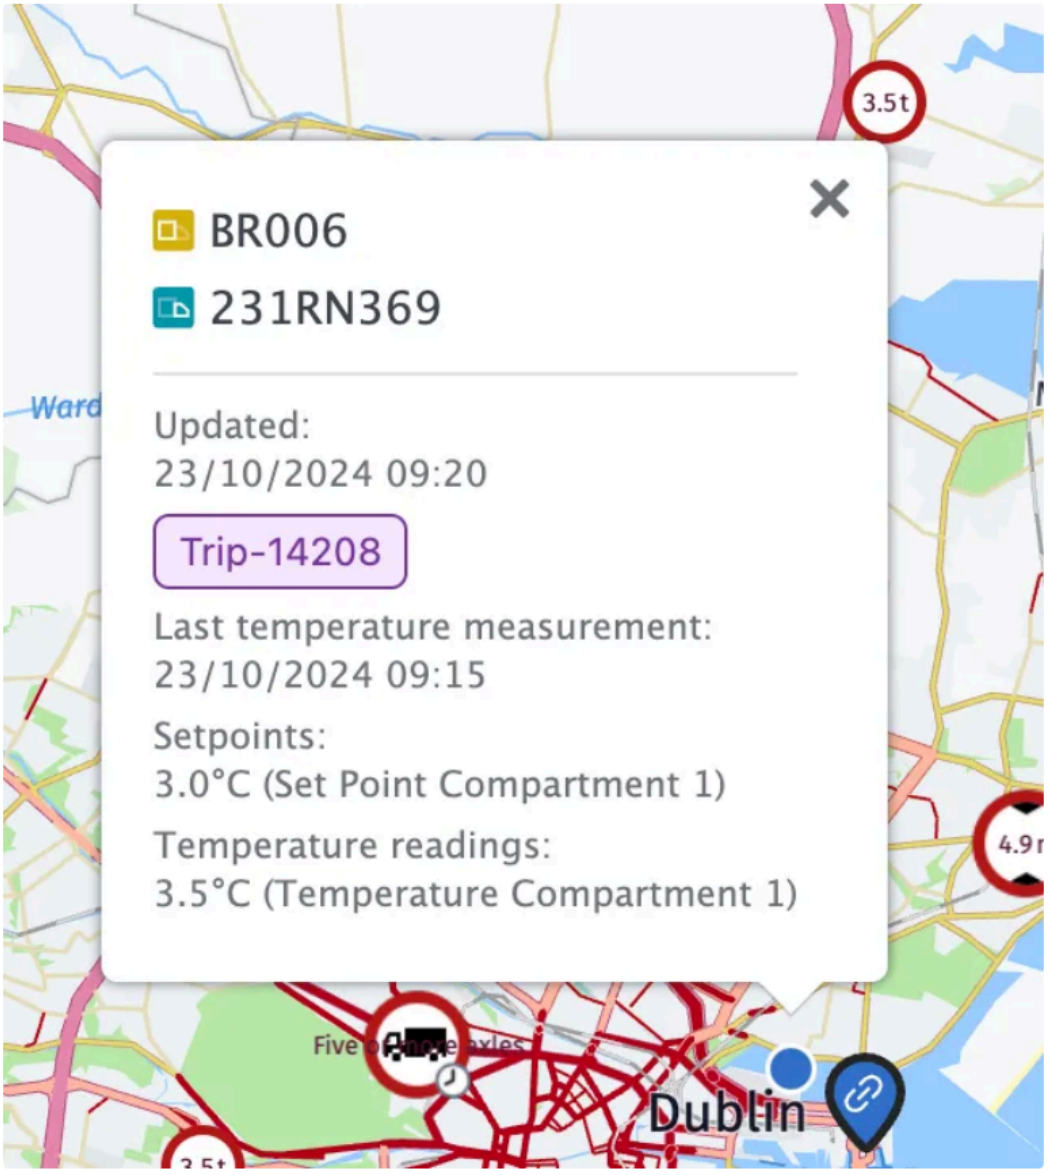

Importing Credit Notes
Allow to type in Date Picker
Order Detail - Show Custom fields

▶ FEATURES - Week 4-5

You can see the full list of options HERE.

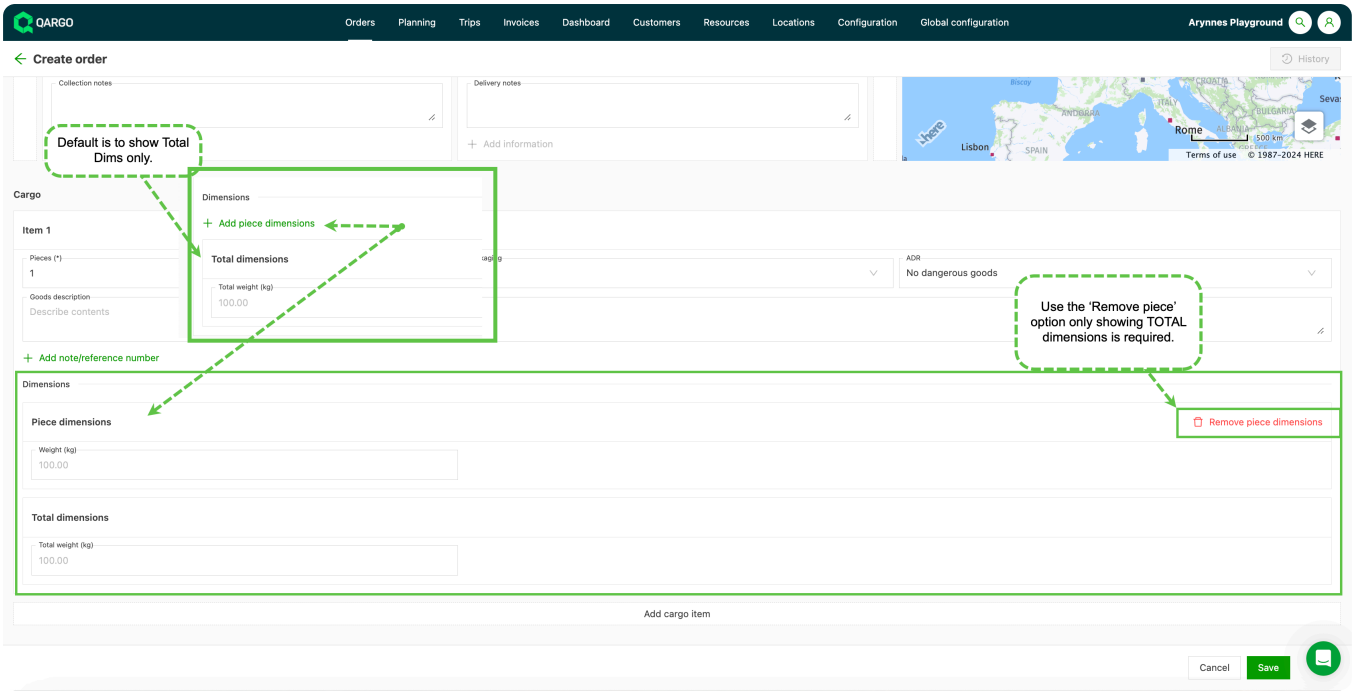

Improved map display of tracked resources during trip.

All resources on the planning board map were shown, which could get crowded when multiple resources from the same trip are shown as separate dots. ***Now, resource dots from the same trip are merged.*** When clicked on the "merged" dot, a list of all resources which have provided the latest updates (ie: location / temperature updates, etc) are now shown.

Order Entry: Format change to entering consignment dimensions.

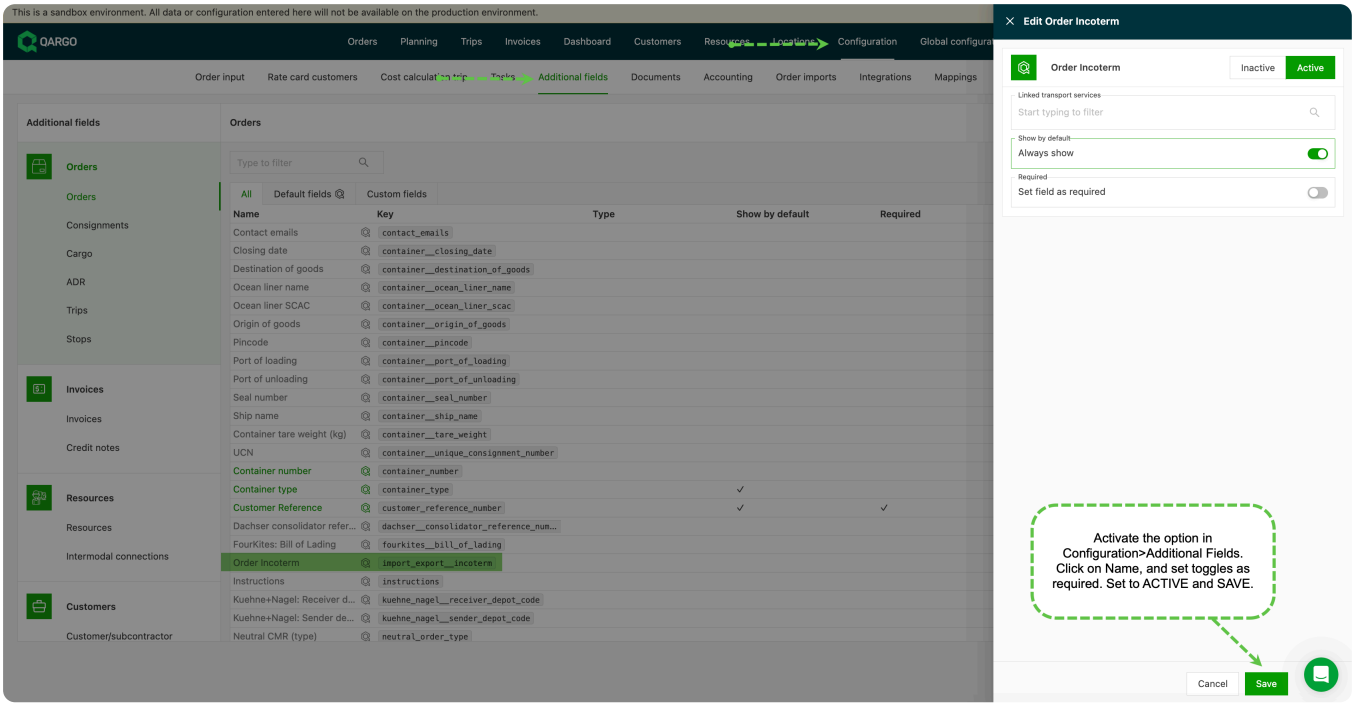

The layout to input piece and total dimensions for consignments has changed. The TABS to choose between showing only total dimensions, or showing total dimensions and piece dimensions has been removed.

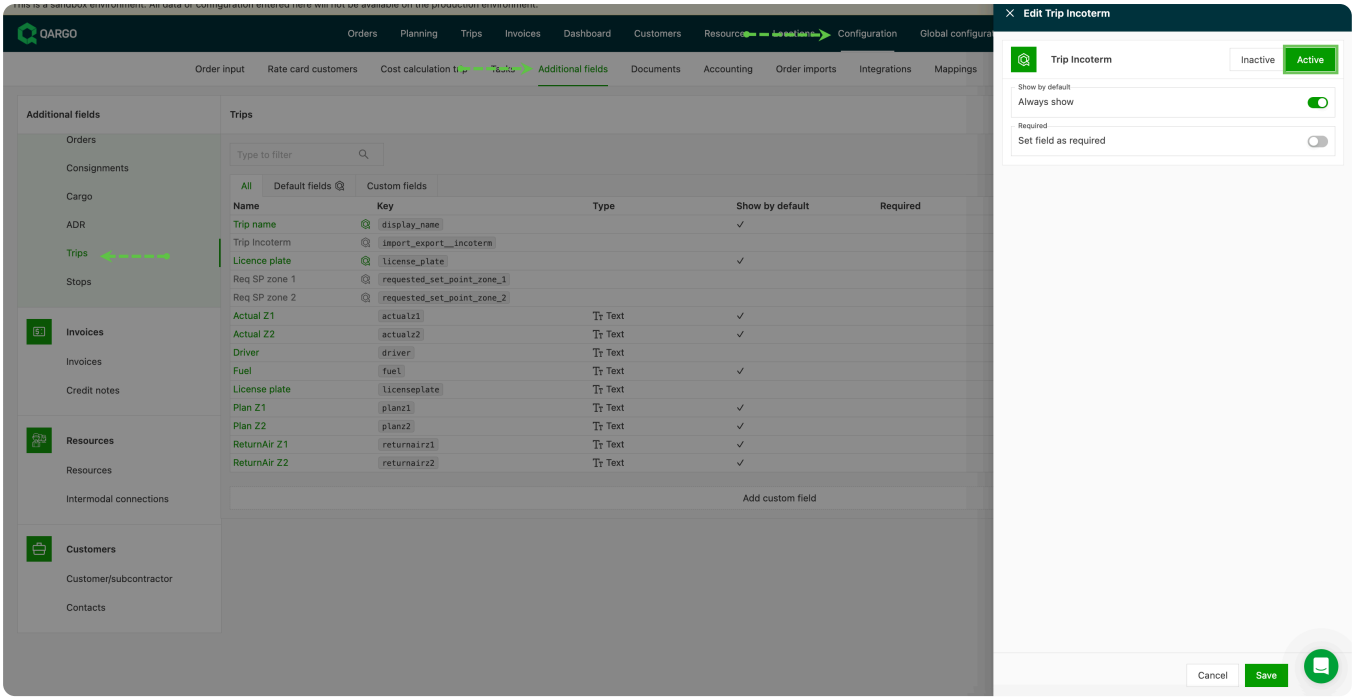

The tabs are replaced with an ***add / delete piece dimensions button***, making the action more explicit. Making all the data available on the same screen reduces any issues where data is entered, but not saved before moving off the screen which often required the user to re-enter data again.

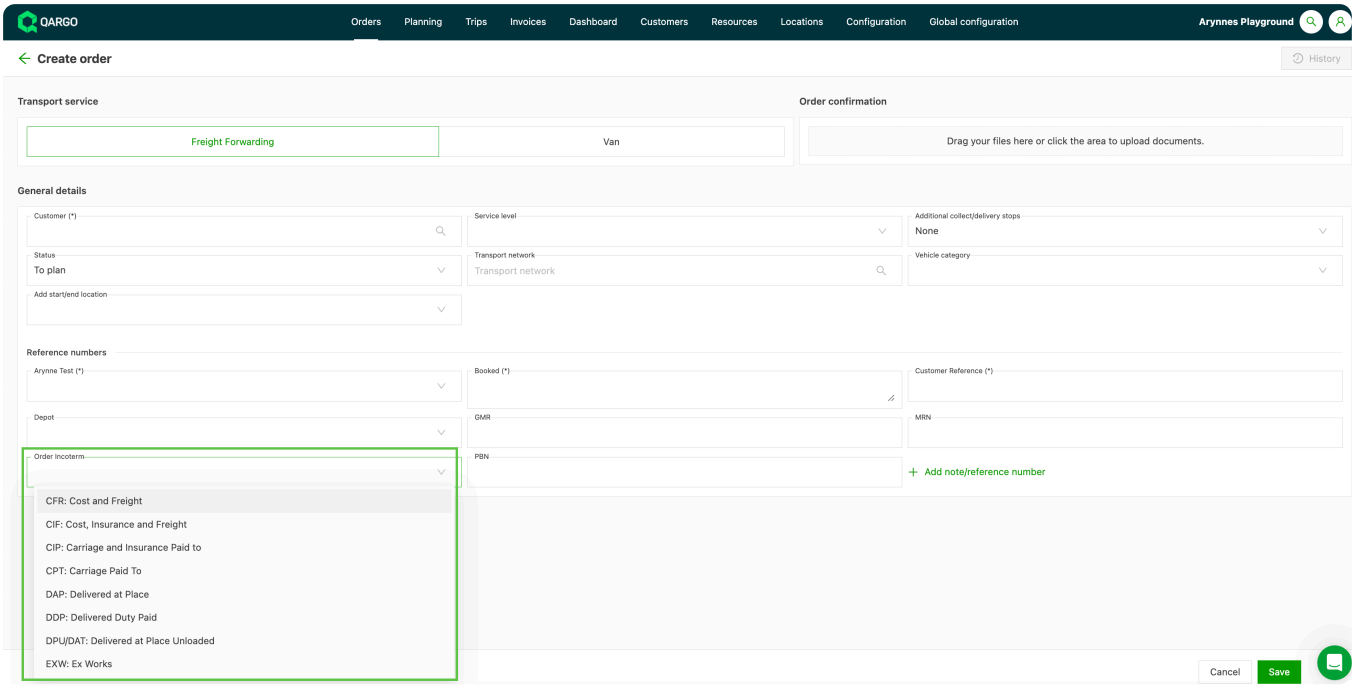

Incoterms - new additional field.

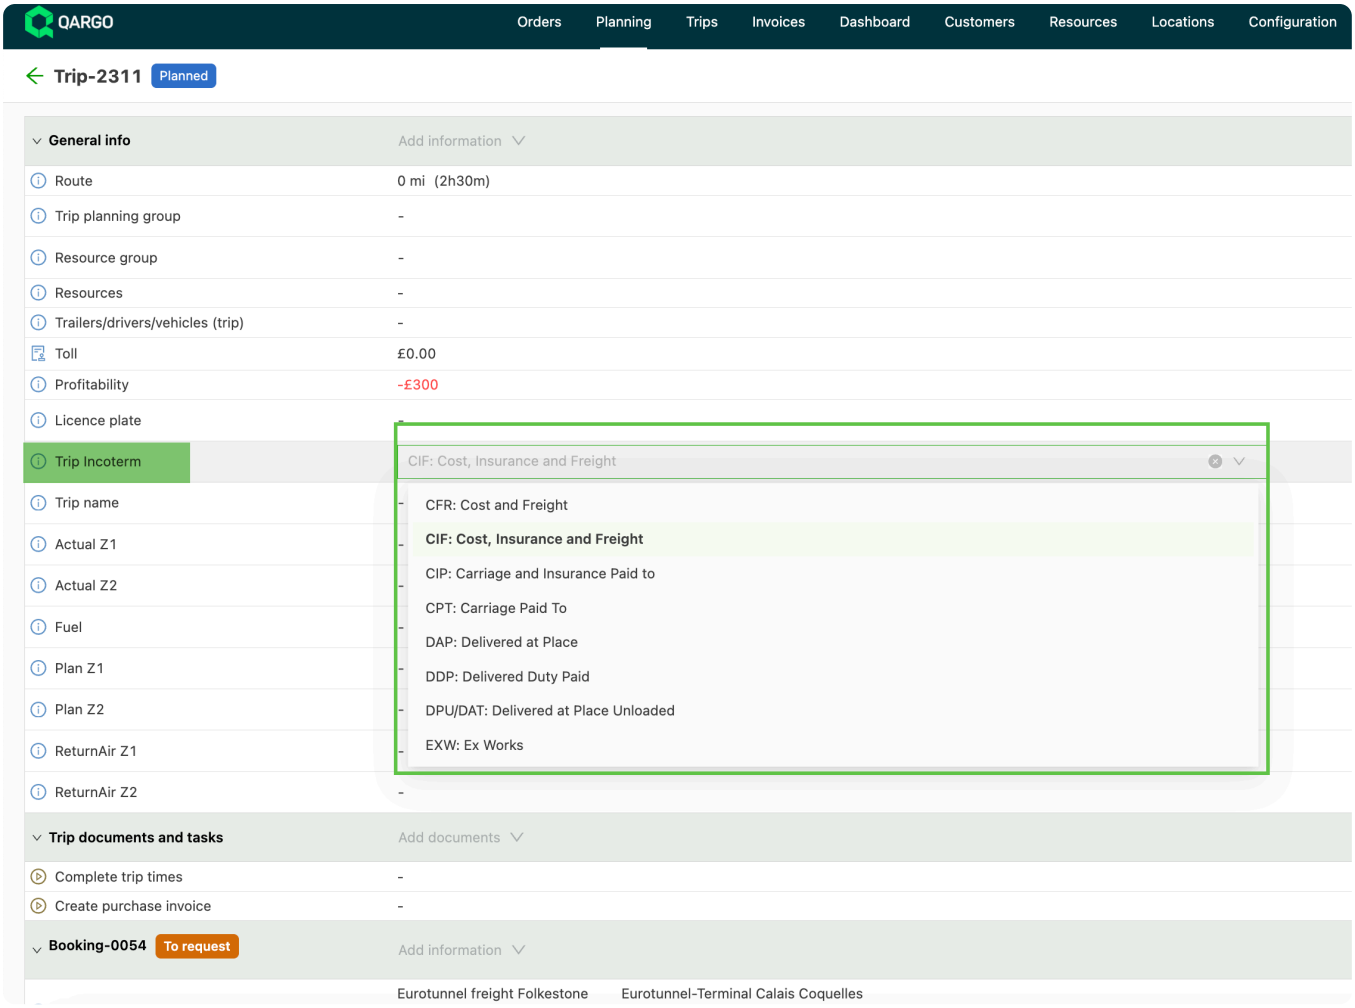

Incoterms define the responsibilities of sellers and buyers in the transaction (e.g. insurance). The new ***additional field*** **"Incoterm"** can now be enabled for a tenant in the configuration window, on order level and on trip level.

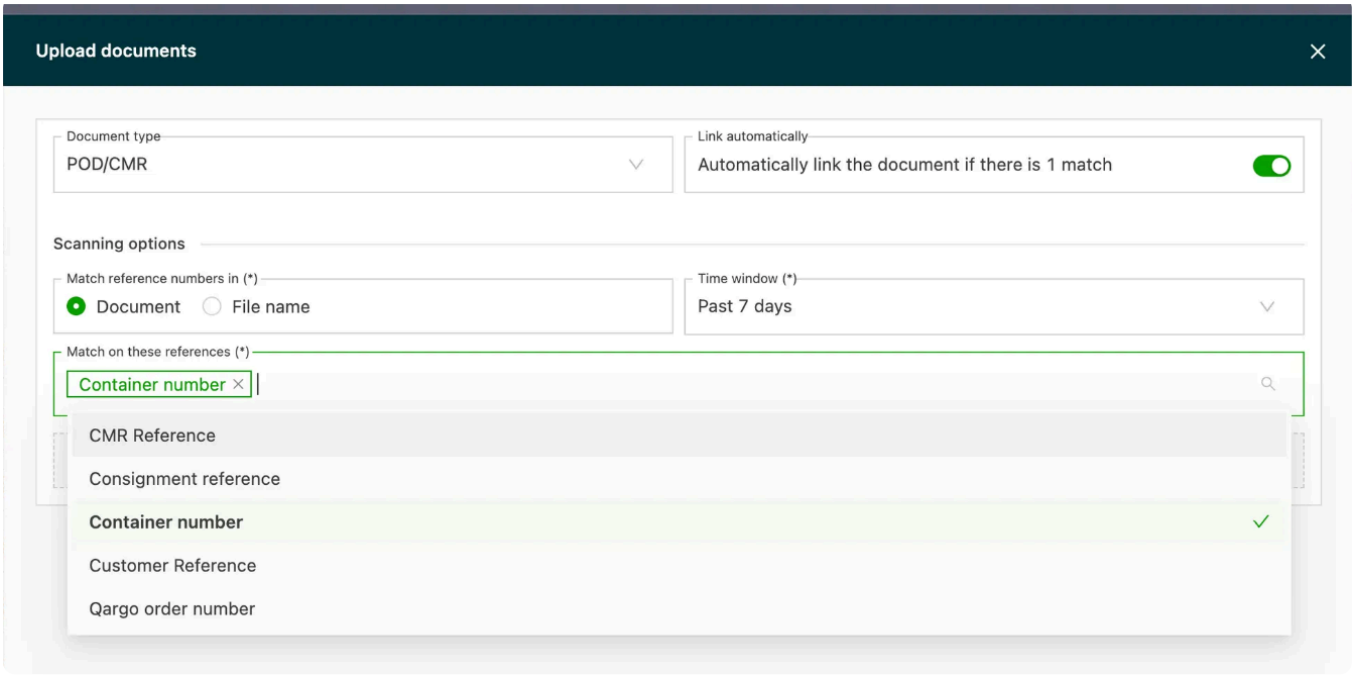

Through a dropdown, users can specify the Incoterm (if applicable) to an order or trip.

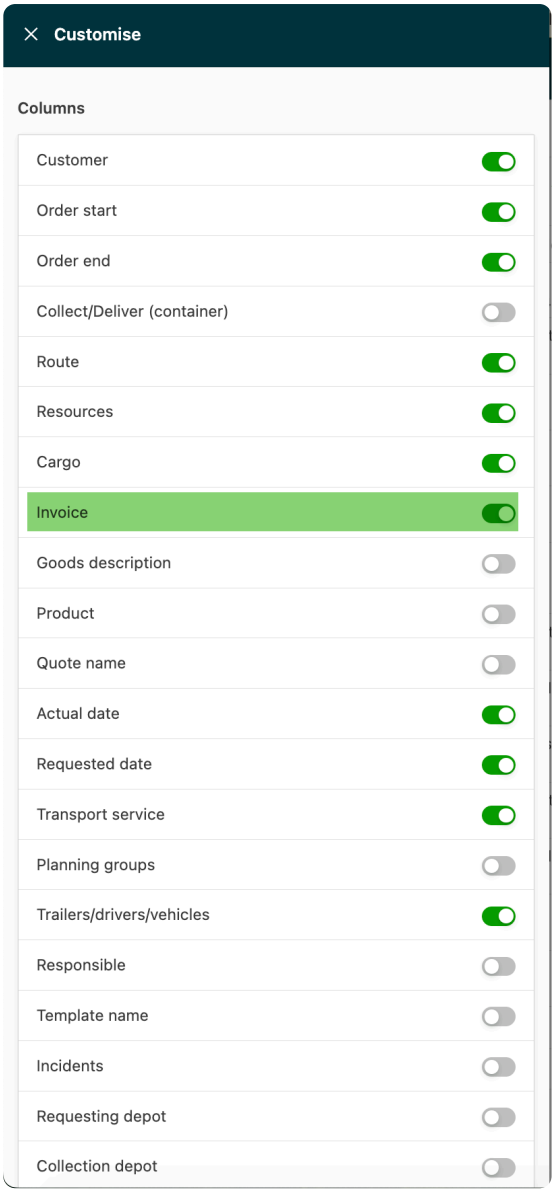

Match documents by container IDs.

Now when scanning documents and matching paperwork, you can choose to match by the container number on the order.

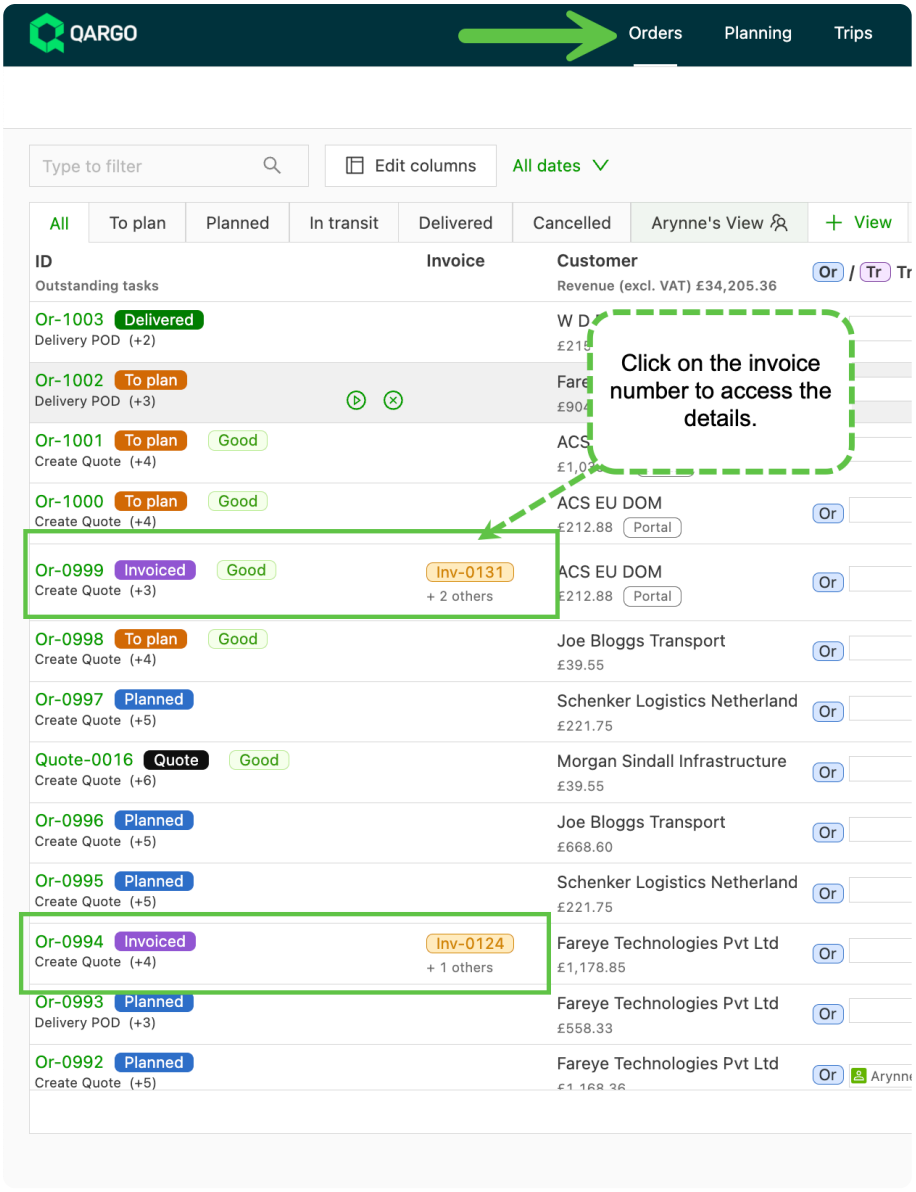

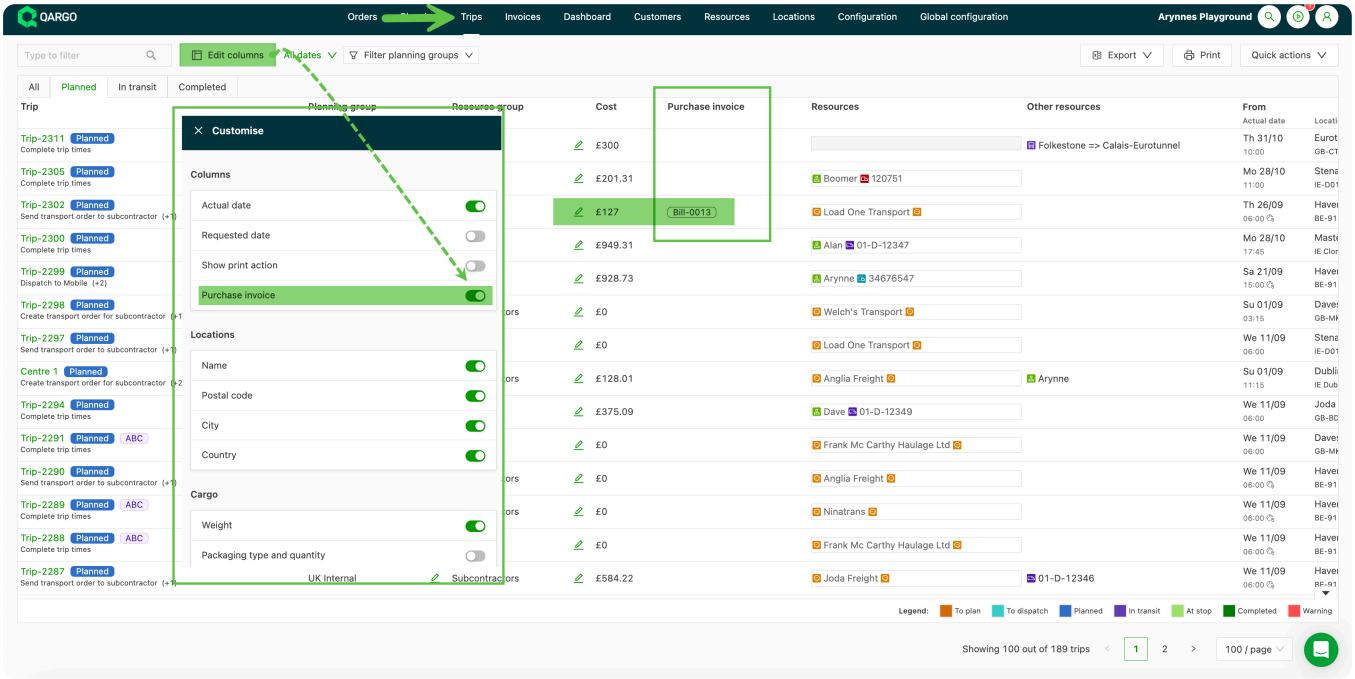

Show invoice columns in order and trips table.

It is now possible to toggle a new column to show in the Orders and Trips Tables, which makes ***INVOICE*** number visible. Use the *Edit Columns* button to toggle ON the Invoice (in orders), or Purchase Invoice (in Trips) options.

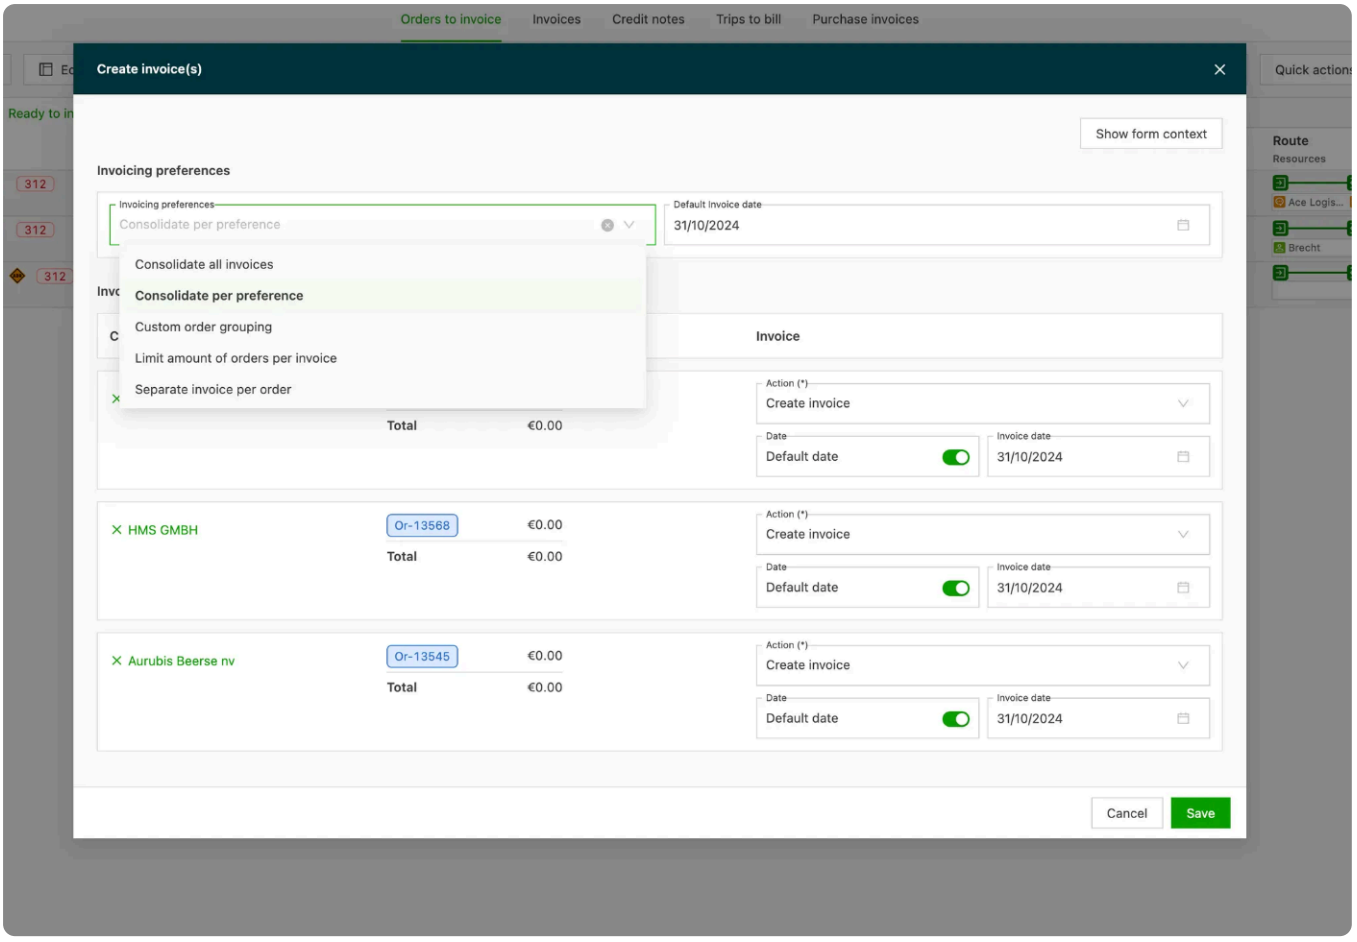

The column is added to the END of the table on the screen.
Click & drag the column to where you want to see it in the table.

More flexibility when creating invoices in bulk.

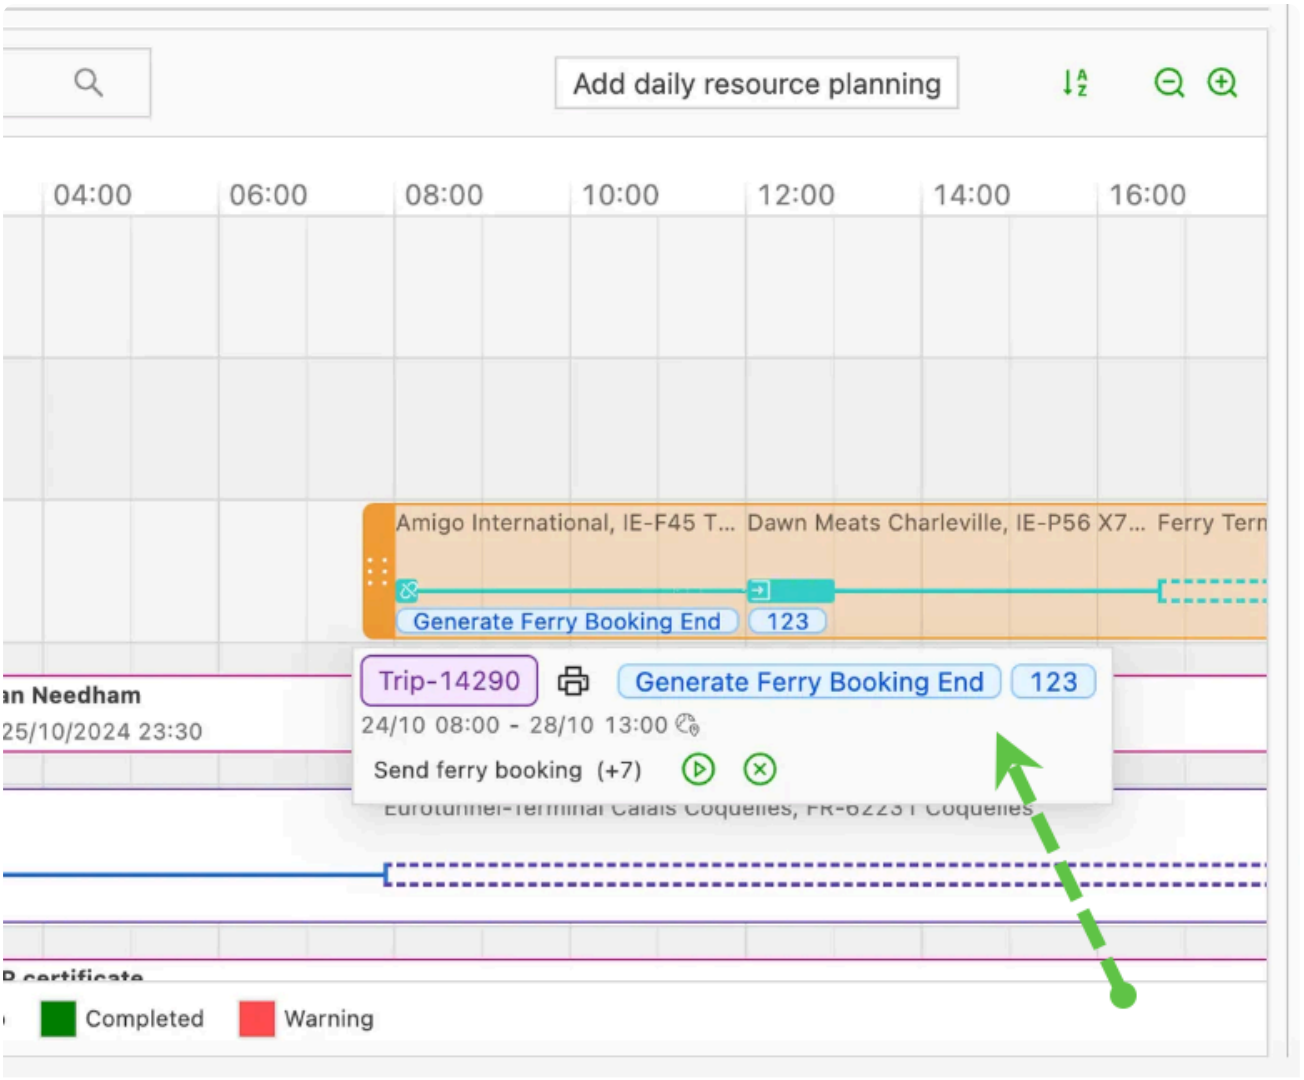

A default preference can be set for each customer. When orders to invoice where selected from multiple customers, the customer preference was ignored, instead a default grouping was applied. Now, the customer preference is kept.
When invoicing orders, one can specify how the order invoices should be sent to the customer (per x amount, grouped by container type, etc).

:::

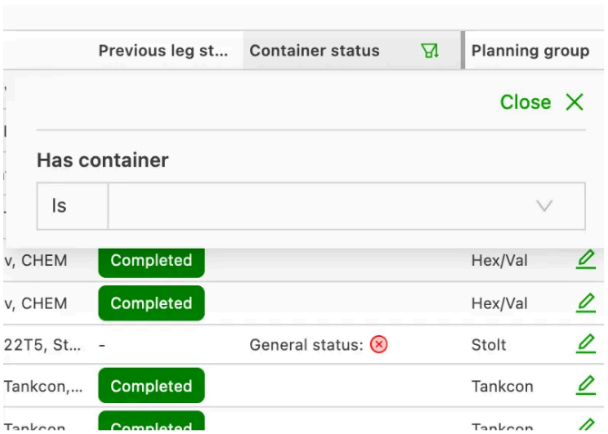

▶ ENHANCEMENTS - Week 4-5

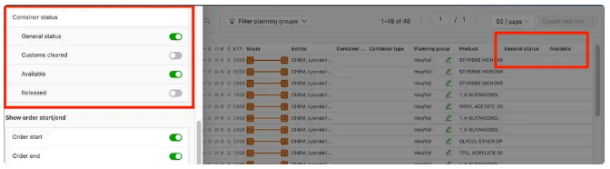

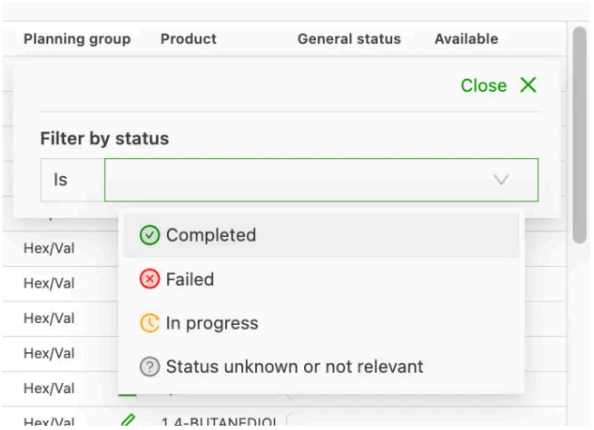

Show multiple container status in To Plan

We used to only show the general status in to plan with a filter whether there was a status or not. Now you have the full flexibility over all statuses and can filter on specific statuses. Before on the left, NEW on the right:

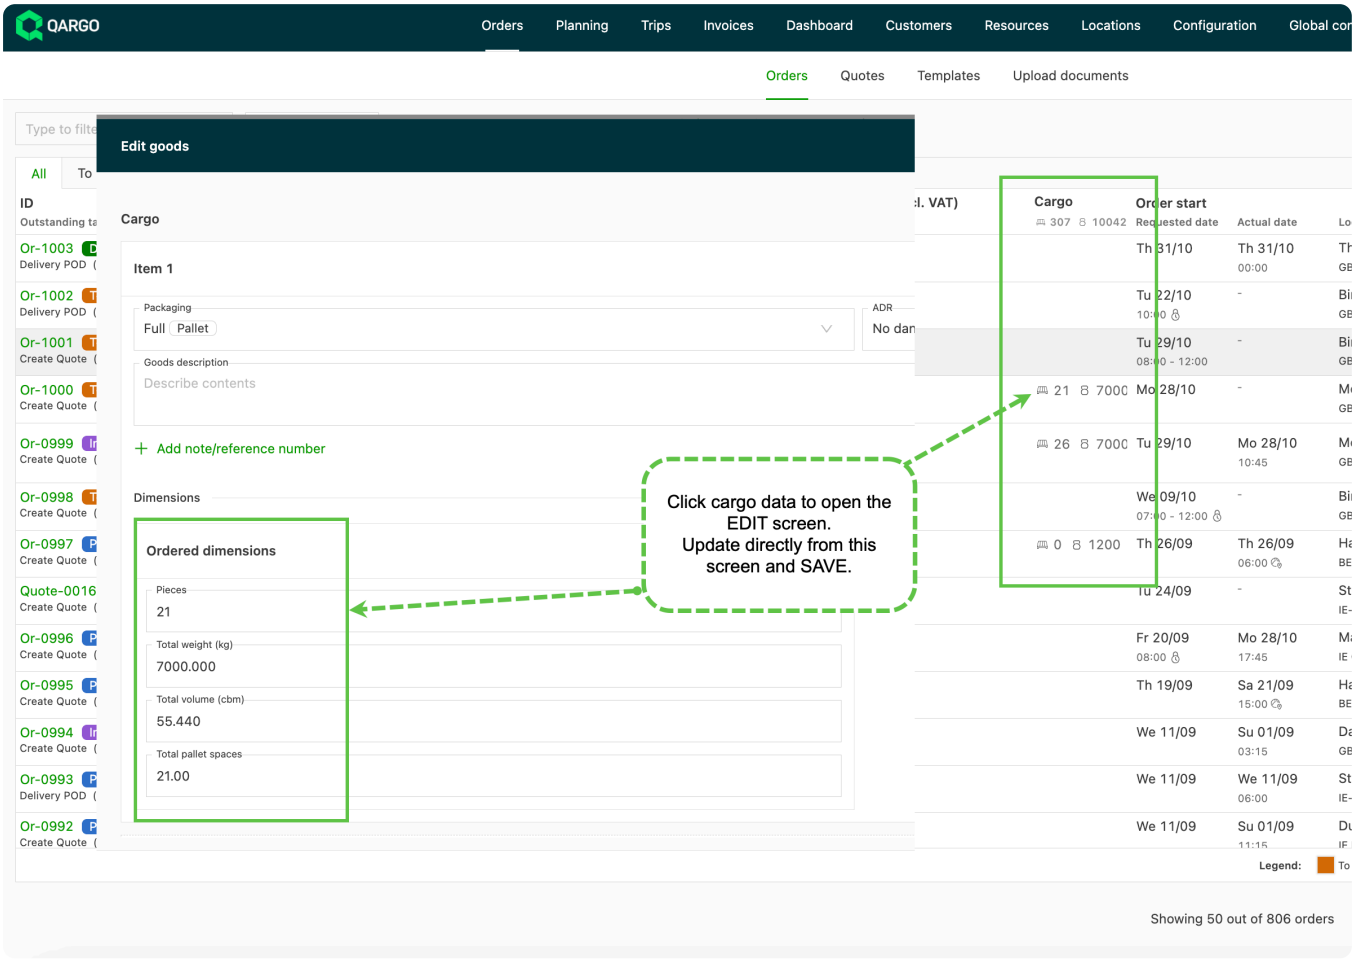

Edit cargo from the order list.

The cargo column in the Order table and To Plan table is now clickable and will open the order to edit the cargo properties (e.g. weight / quantity) of the first consignment in the selected order.

When multiple consignments are present, an alert is showed to the user to indicate they are editing the first one. :::
