ORDERS - Display Additional Resources.

This article highlights the update to customise order overview to show secondary resources allocated to an order or trip.

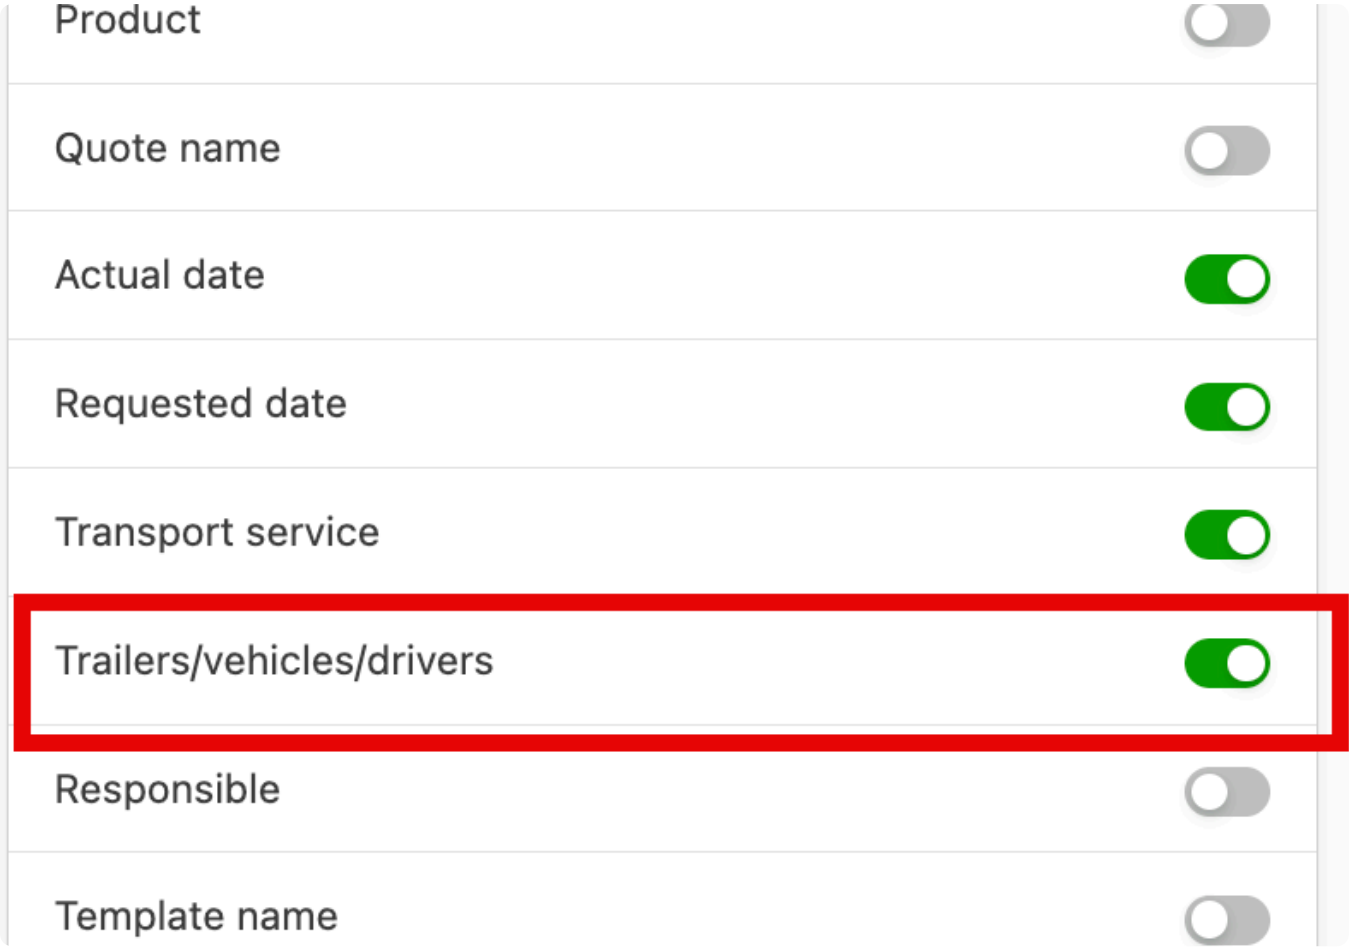

Updated 28 August 2025

It is now possible to see secondary resources that are allocated to either an order or a trip, directly from the Order View.

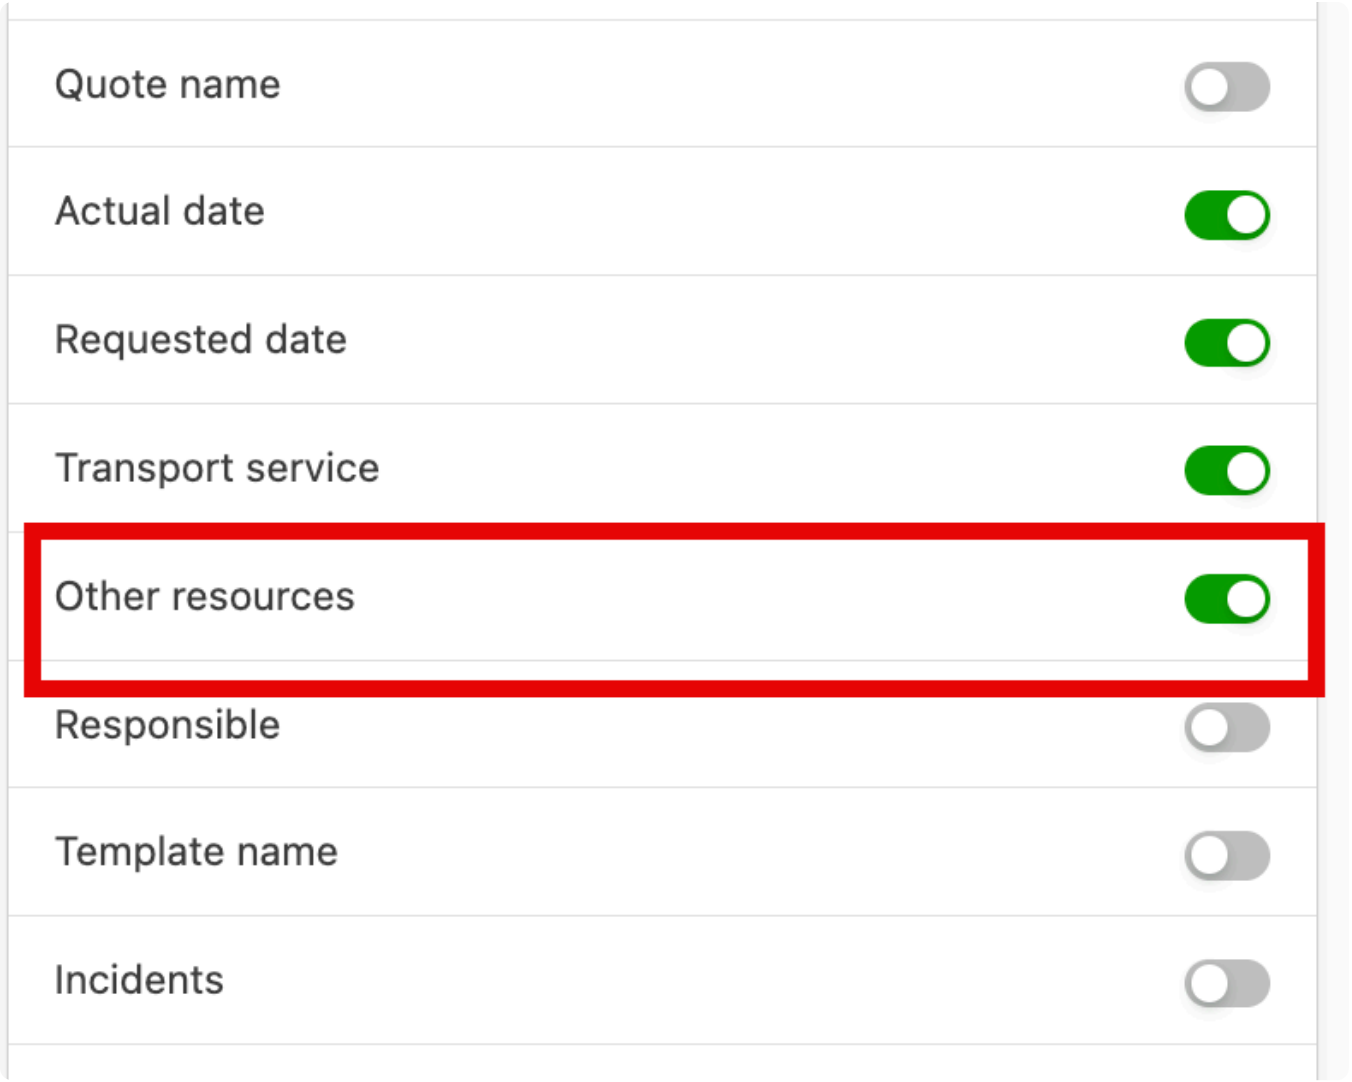

- Container/Trailer column has been adapted to show both **ORDER** (top row) and **TRIP RESOURCE** (bottom row) allocations.
- View and assign secondary resources from the overview.

To view these in the order or trip views, the option should be toggled on via 'Edit columns' button.

- In order to see these in the **EDIT COLUMNS**, you must have Secondary resources configured.

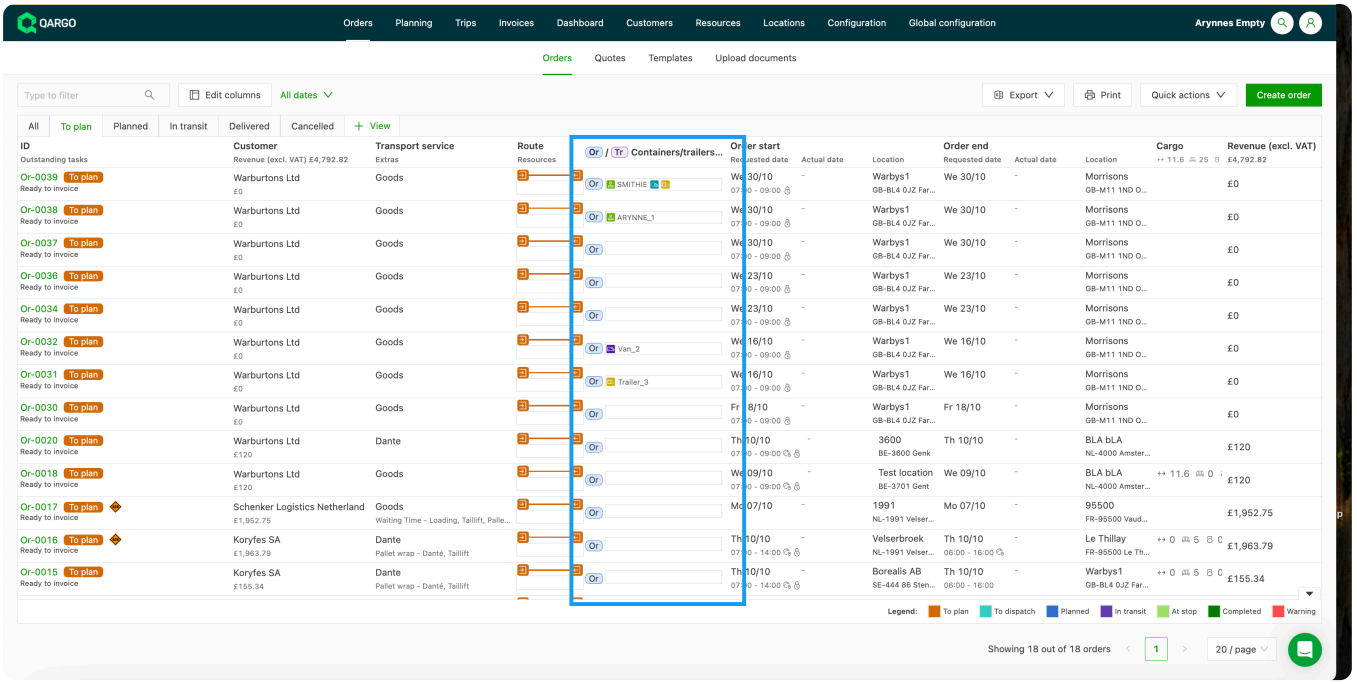

📚 If Resources are not configured, it will show up as **'Other Resources'** when viewing 'Edit Columns'.

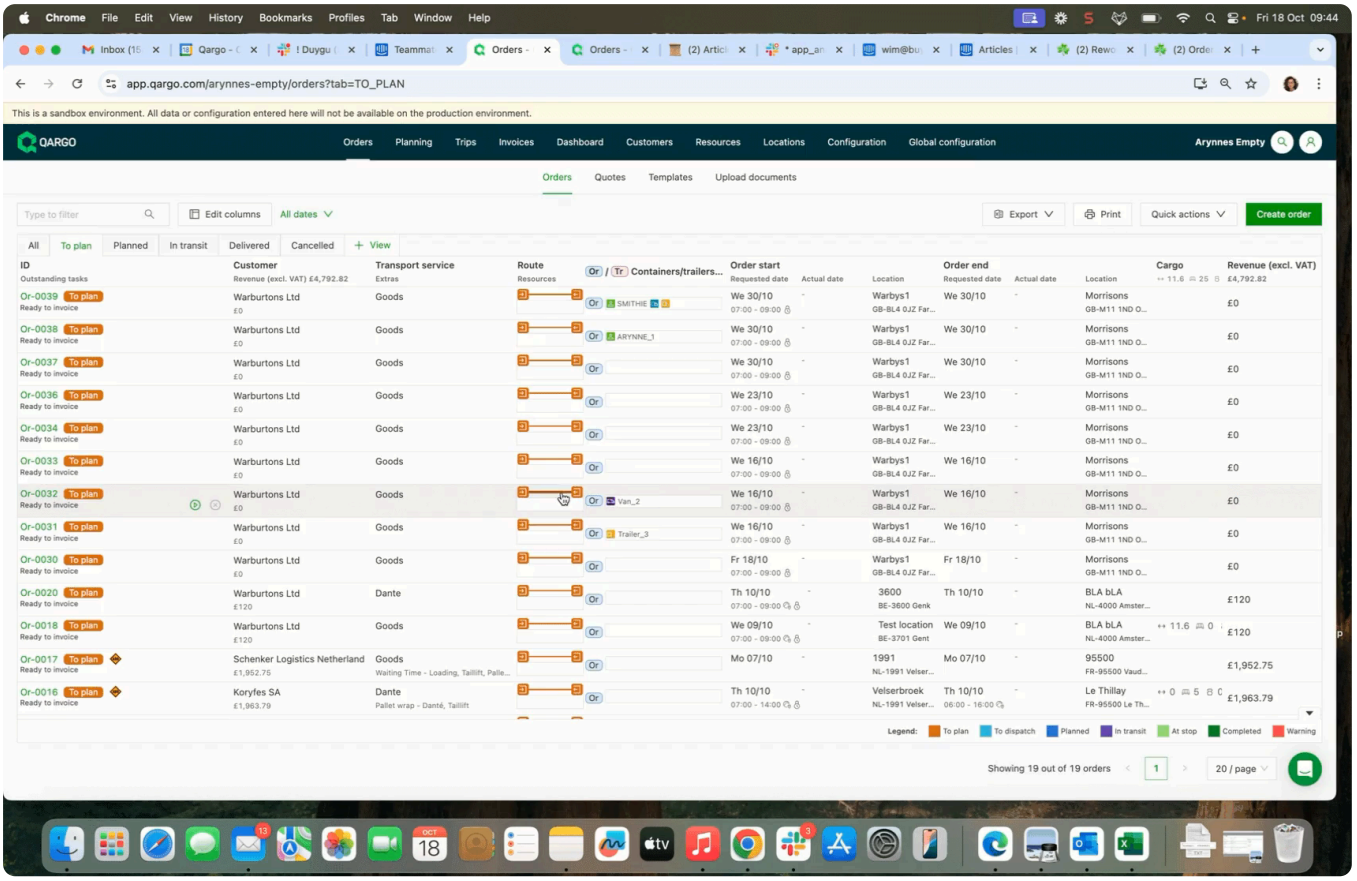

💬 Contact Qargo Support to enable specific Secondary Resources to show.

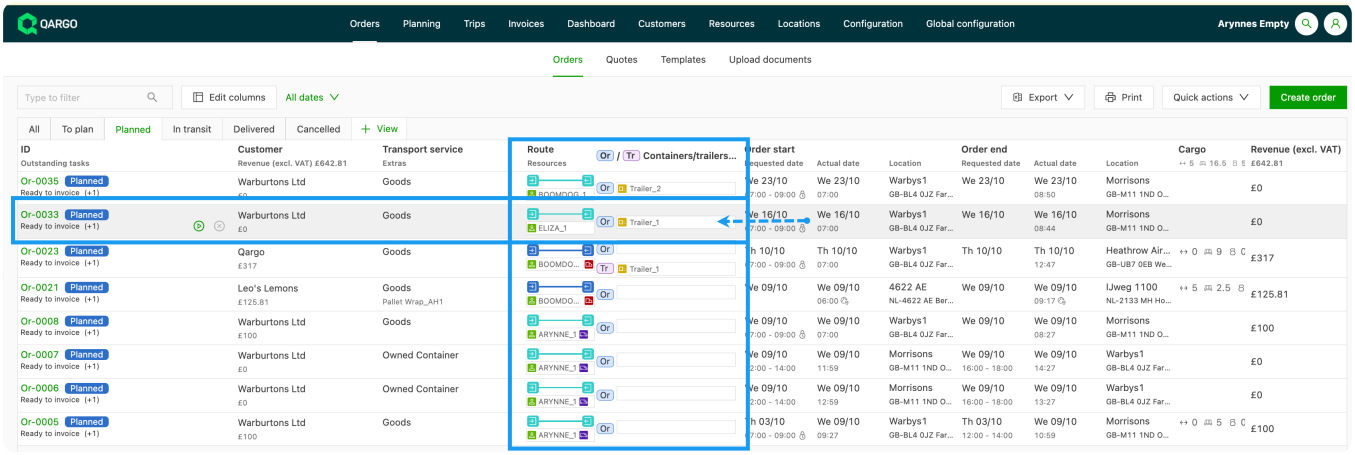

- Once the option is toggled on a new column is displayed on the **ORDER OVERVIEW SCREEN**.

- Assigned Resources at the order level will show in the **'OR' fields**.
  - It is possible to allocate a resource directly to the order from this field.

- If the resource is assigned on the order, once the order is planned the resource continues to remain visible in the **Or** field.

- If a resource has been assigned to a Trip, it will show in the **Tr** field, and it is also possible to Assign or Update resources directly from this field.
