Feature Release June 2025

This article highlights the NEW features and enhancements released by Qargo this month.

Updated 20 February 2026

Week 1

Orders: AI Signature detection on POD / CMRs
Configuration: Configure decimal separator preference
Configuration: Routing default preference
Mobile App: Driver read notification for Trip confirmation

Week 2

Intermodal: Quick Actions update
Orders: Select pdf pages to scan for orders
Orders: Save custom view columns
Orders / Invoices / Trips: Enhanced Bulk Task Processing

Week 4

Trips: Samsara dispatch function available
Intermodal: Improved visibility for booked connections

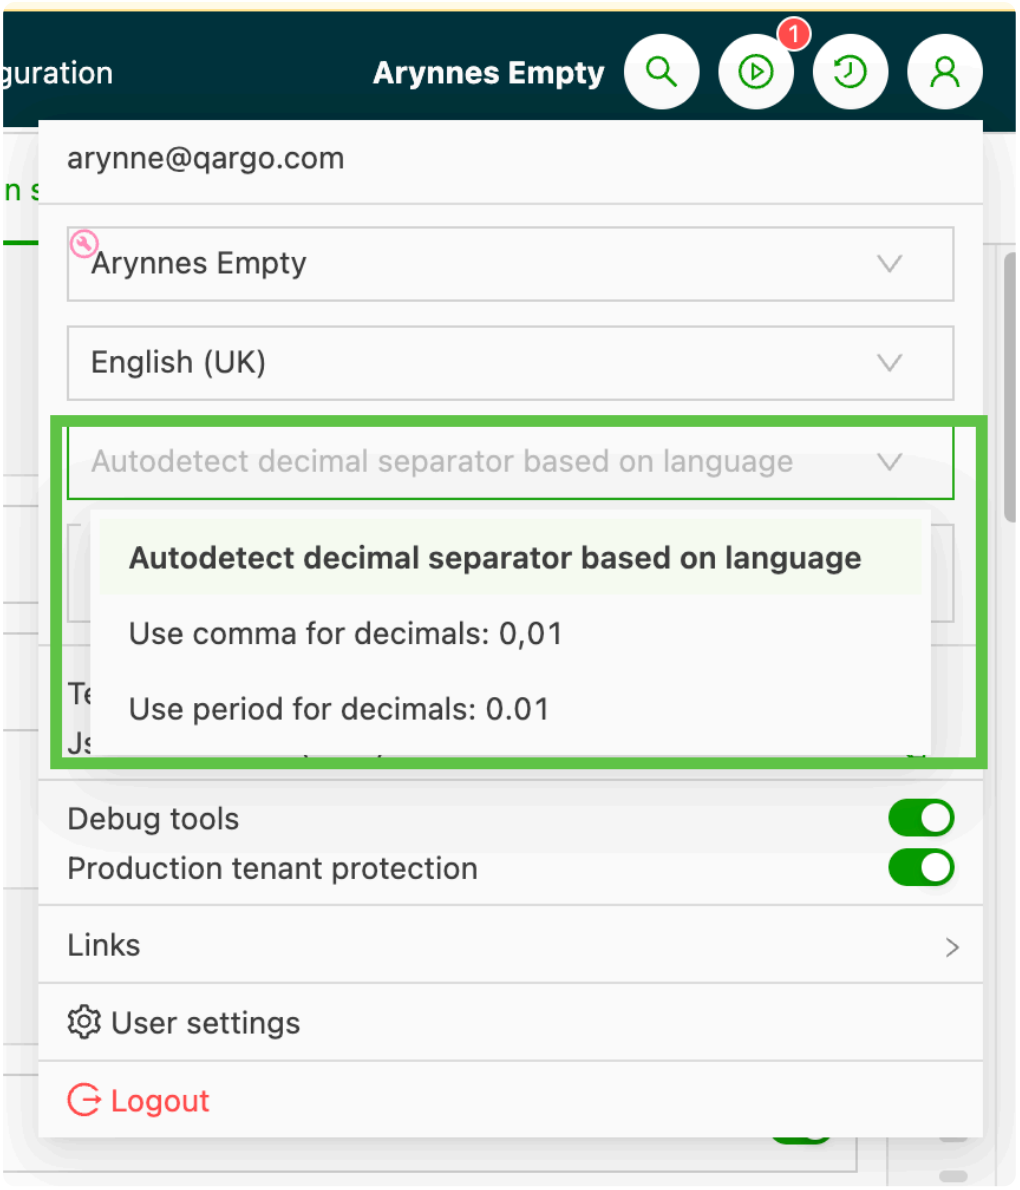

▶ **Week 1**

Configuration: Configure decimal separator preference

Different locations use different options as a decimal separator, when entering amounts. Users can now choose what decimal separator to use to avoid any confusion when generating amounts throughout the system.

There are 3 options available:

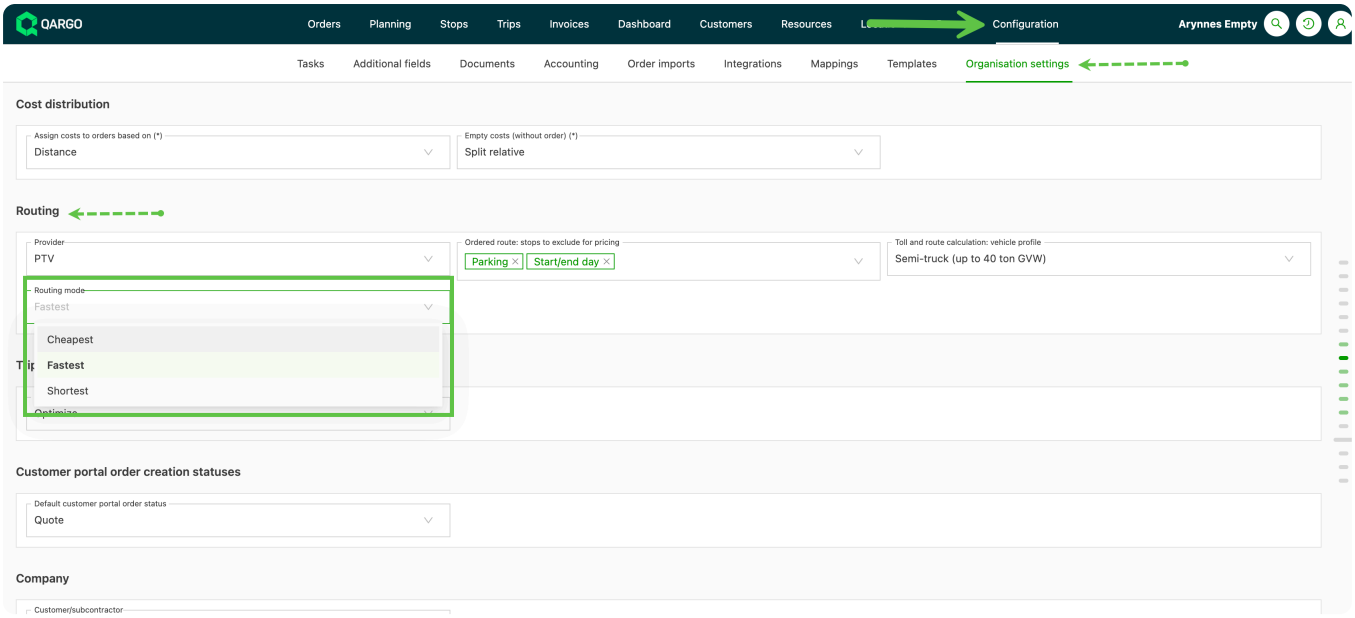

- Autodetect decimal separator based on language (Based on user's language setting in tenant.)
- Use comma for decimals: 0,01
- Use period for decimals: 0.01

Configuration: Routing default preference

It is now possible to adjust routing defaults, with 3 options available:

- Cheapest
- Fastest (default)
- Shortest

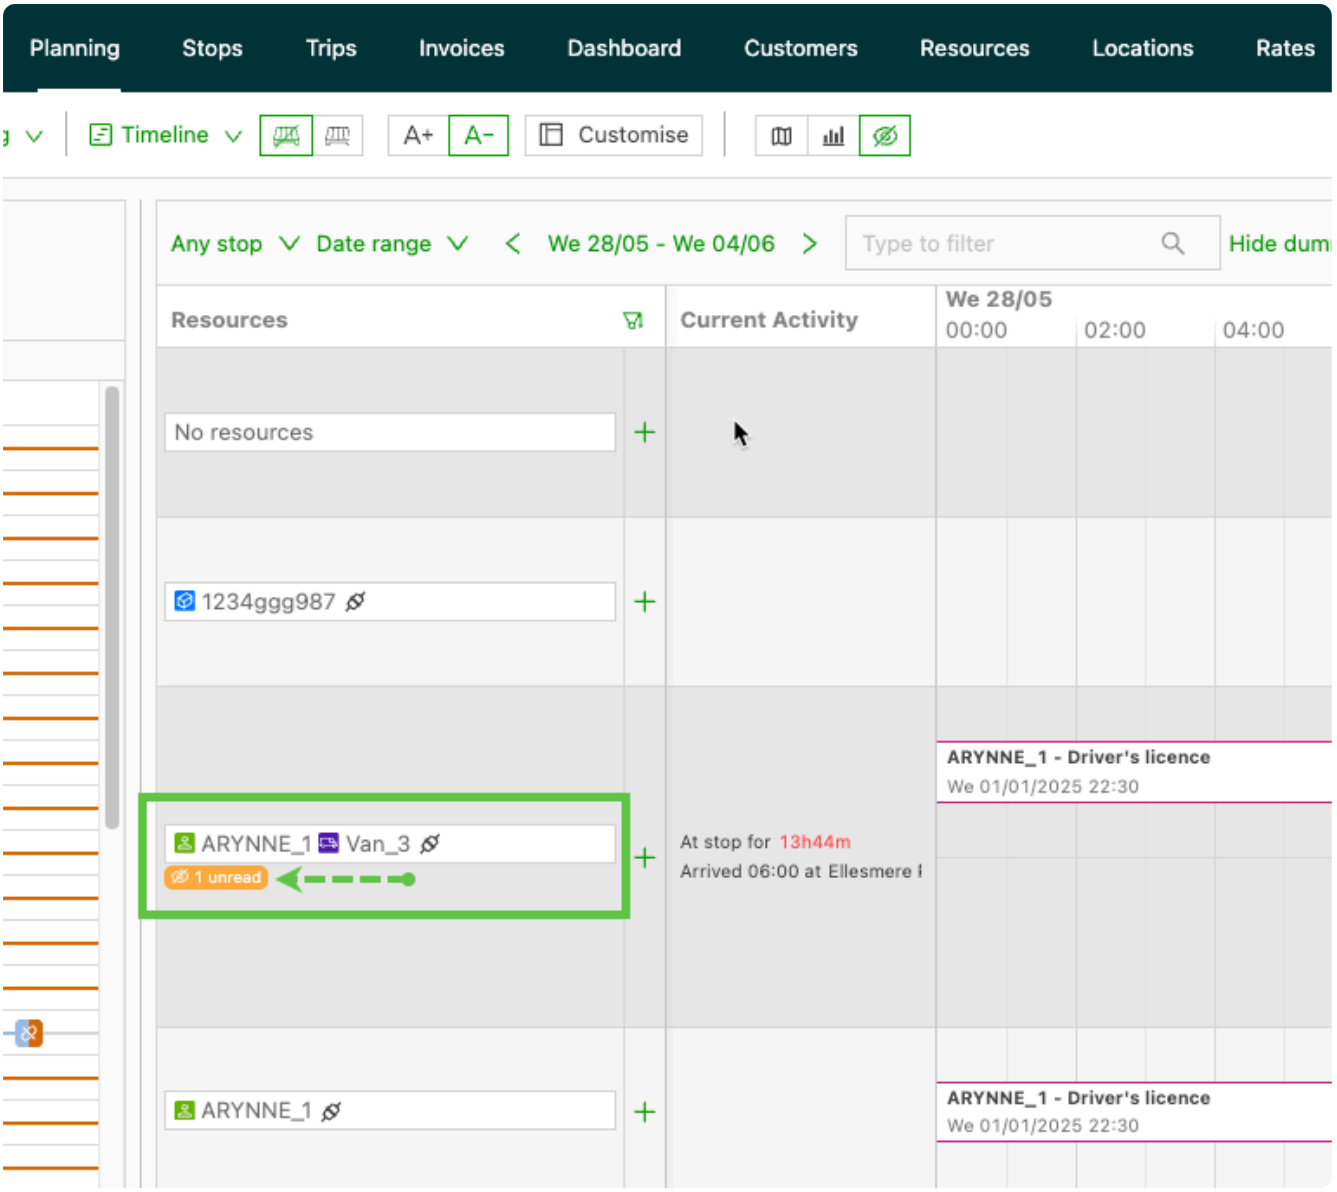

This flexibility allows users to control how their routes and tolls are calculated, offering more accurate routing and costs savings that come with it.

> Restricted to users that have access to update **CONFIGURATION** only.

Mobile App: Driver read notification for Trip confirmation

No more guessing if the driver has received their latest trip details!

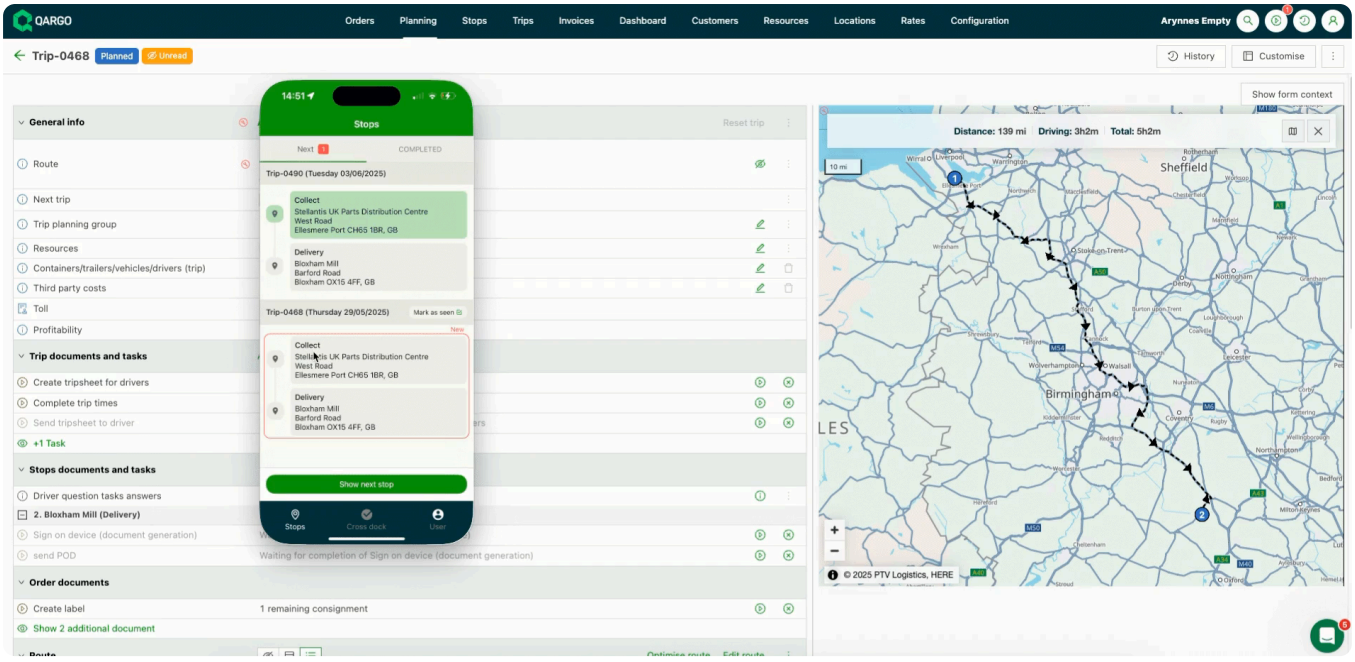

When a trip is sent to the driver's mobile, it will now have a label showing ***'UNREAD'.*** This will show in the trip and on the driver details in the Planning screen.

On the driver side, in the mobile app, it will show the details in a RED border indicating **NEW**.

The driver MUST click to acknowledge the trip.

Once the trip is acknowledged in the app, the label will update to show ***'READ'*** in the trip. The label on the planning board is removed.

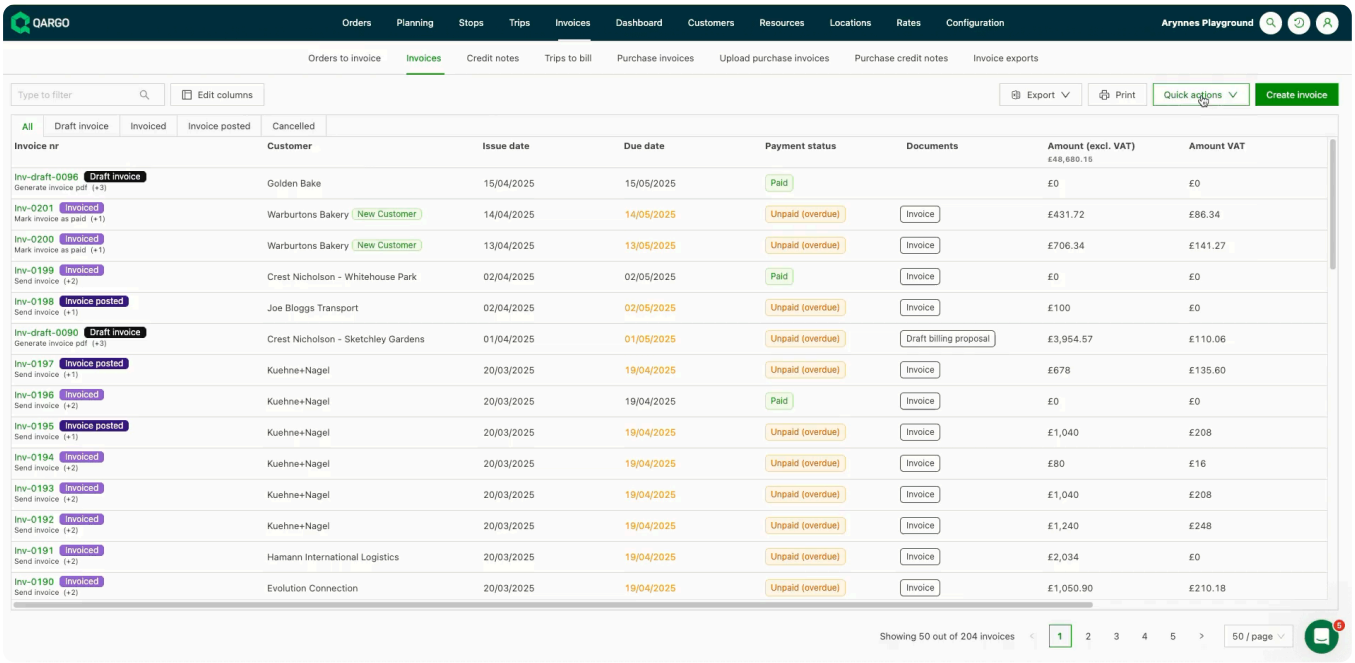

:::

▶ Week 2

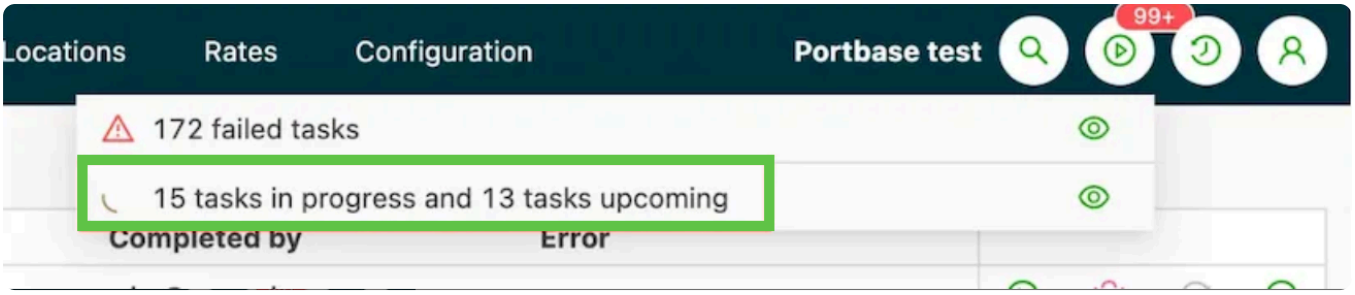

Orders / Invoices / Trips: Enhanced Bulk Task Processing

When executing tasks in bulk the previous limit of 100 records has been lifted; it is now possible to select all records for processing.

- Not all tasks will process at the same time.
- To distinguish, tasks will show status of ‘in progress’ and ‘upcoming’ – those indicated as ‘upcoming’ are tasks waiting to be put in progress.
- This will happen automatically, once you have selected the records, no further action is required.

The task indicator will display while the tasks are being updated:

Selecting multiple records is available across the following pages:

- Orders
- Trips
- Invoices
- Purchase Invoices
- Credit Notes
- Purchase credit notes :::

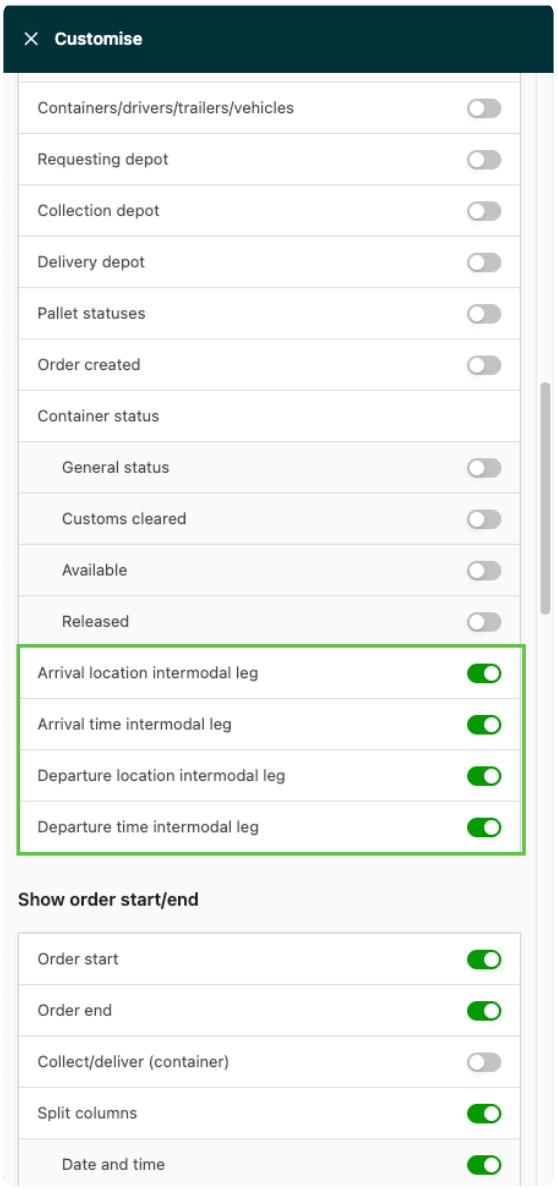

▶ **Week 4**

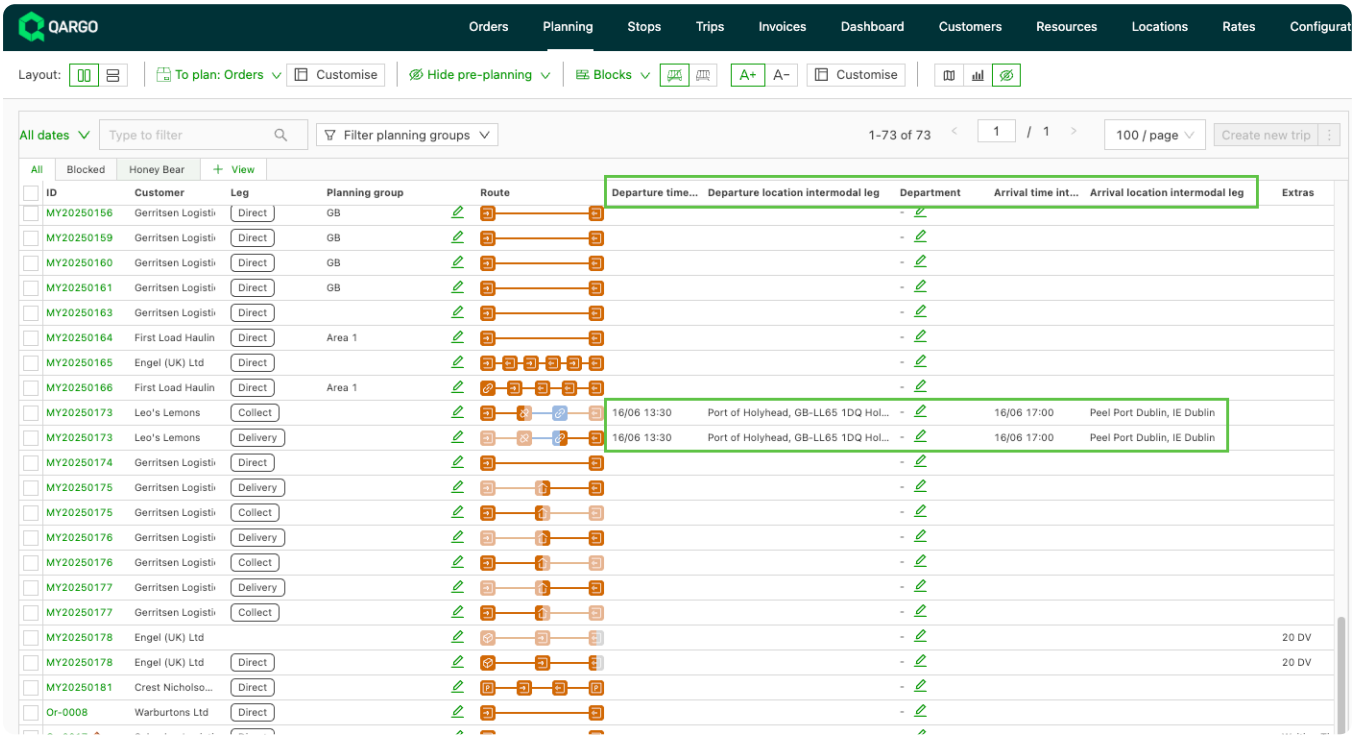

Intermodal: Improved visibility for booked connections

When booking an intermodal connection, details were previously only visible within the order. Visibility of connection details for arriving or departing connections is now available in Planning.
Under *To plan: Orders* there are 4 new columns with information on the intermodal arrival and departure location and dates:

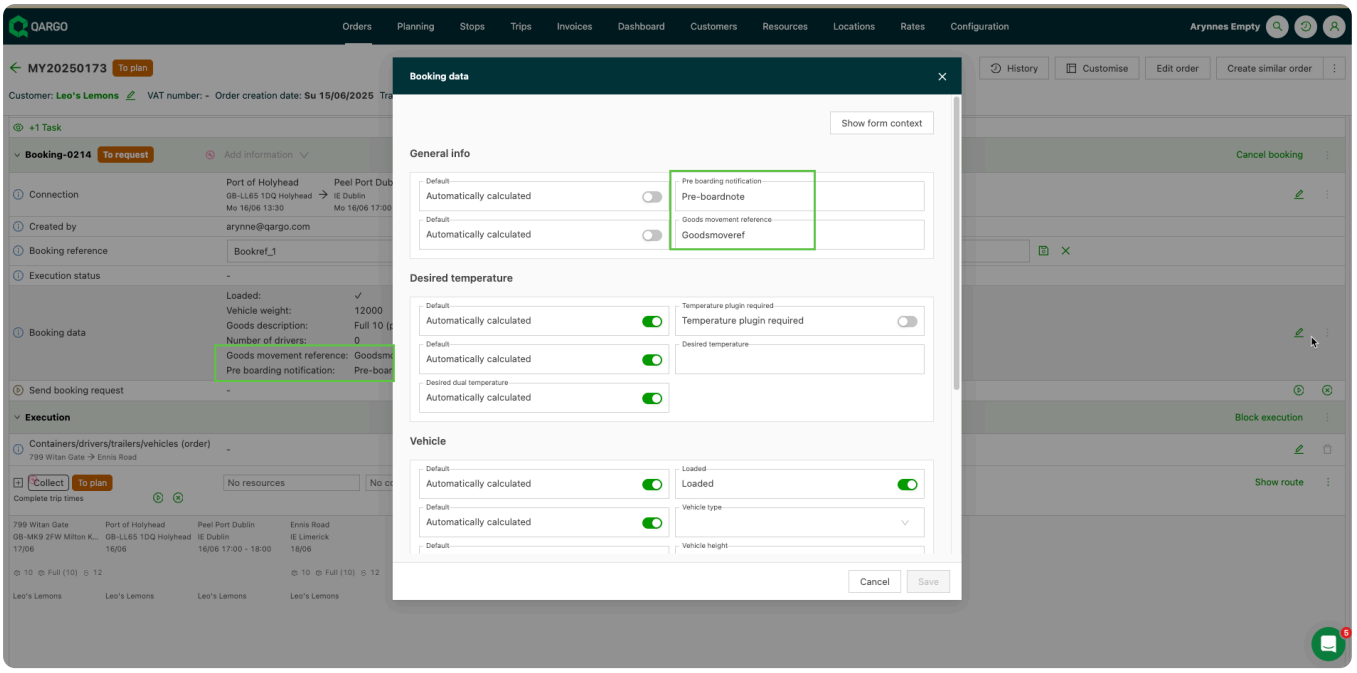

- Departure time intermodal leg
- Departure location intermodal leg
- Arrival time intermodal leg
- Arrival location intermodal leg

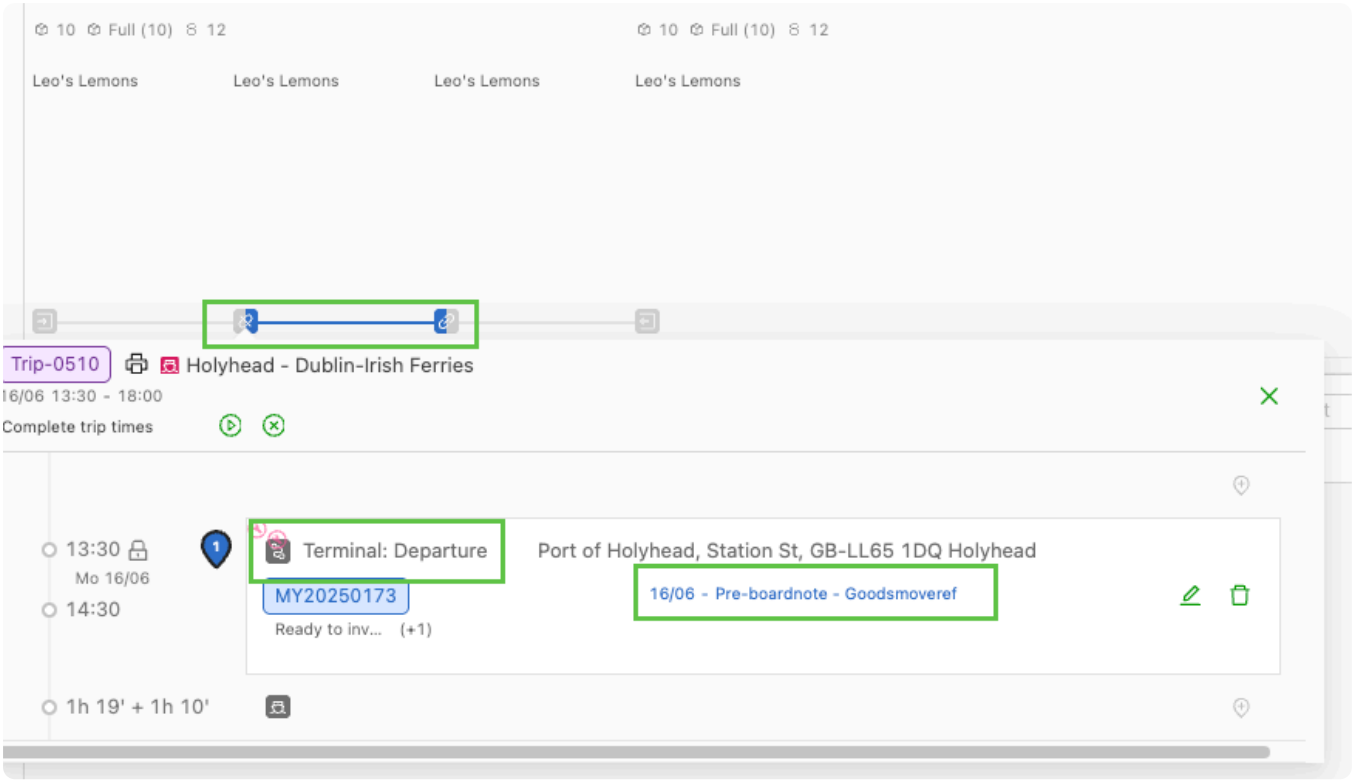

Click ***'Edit Columns'*** and toggle on.

Booking related references are now visible on the terminal stop as well. These can be added to the booking data, and will show when the terminal stop is expanded.

Customer Impact

- Better overview of intermodal information on orders and trips
- Easier planning by having intermodal arrival and departure information easily available :::
