FAQ: Filtering for Tomorrow/Yesterday

This article explains how to use the enhanced date filters to display items scheduled for tomorrow or yesterday in any list view.

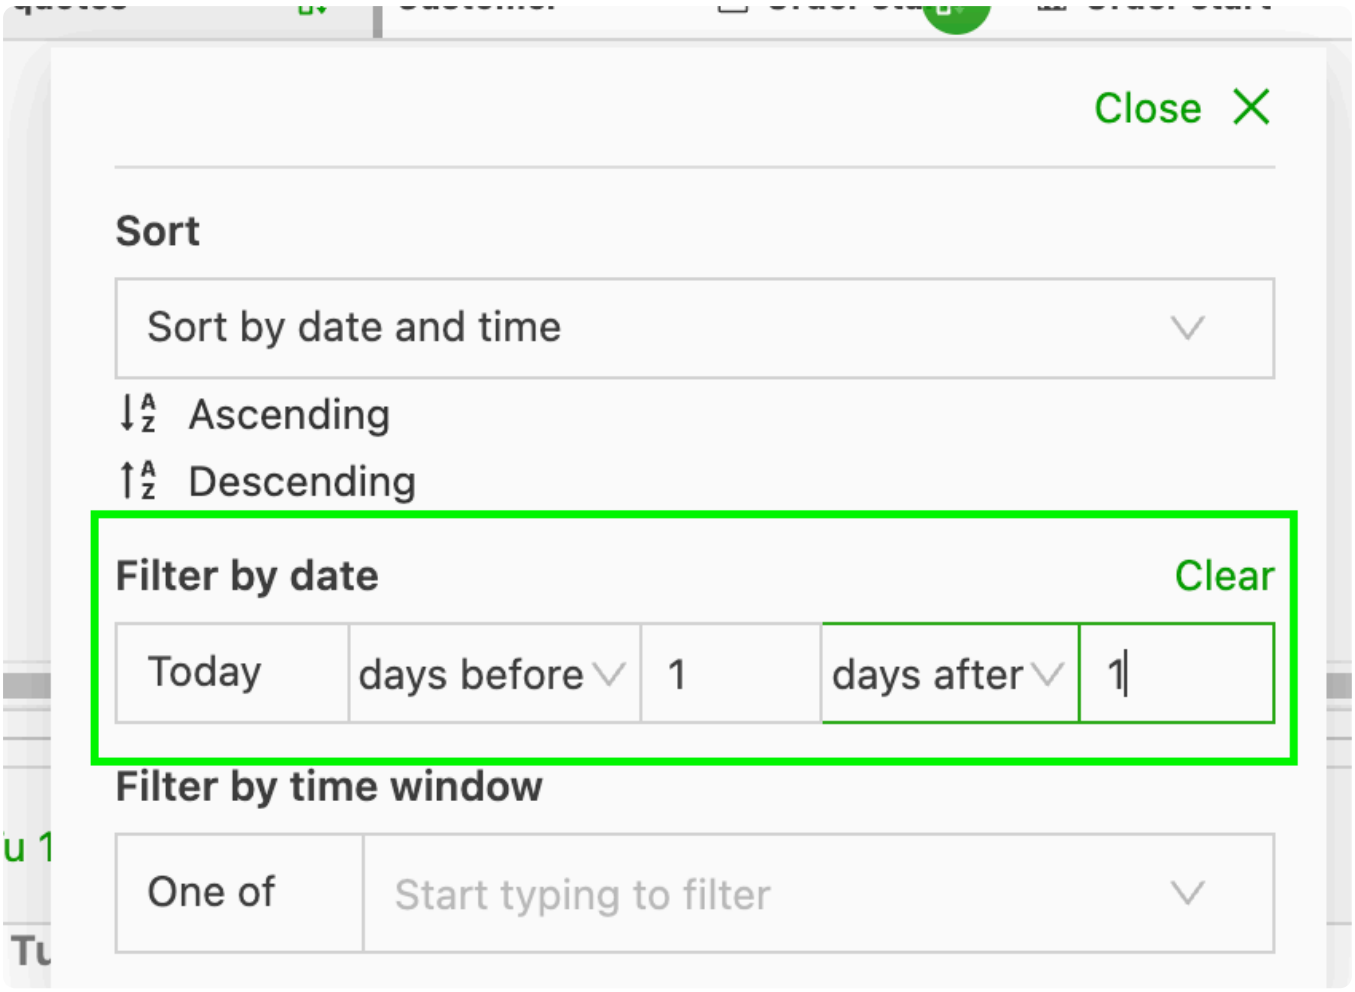

Updated 20 February 2026

Q: How can I create a list view that strictly shows orders or activities scheduled only for tomorrow (excluding today)?

A: You can now create precise views for 'tomorrow' or 'yesterday' using the enhanced relative date filters, which are available in all columns with a date filter.

Previously, using filters like "days after 1" still included today's items. Now, you can specify the target day directly:

- **For Tomorrow:** Use the date filter and specify a range such as **'days after 1'** to start the filter, and then select a range of **'days 1'** to strictly limit the view to the following day.
- **For Yesterday:** Similarly, you can specify the filter to only show items from **'yesterday'** for quick daily reviews.

This enhancement ensures your planning views are highly accurate and focused on the tasks immediately ahead or just completed.
