Document visibility on the mobile app

Updated March 4, 2026

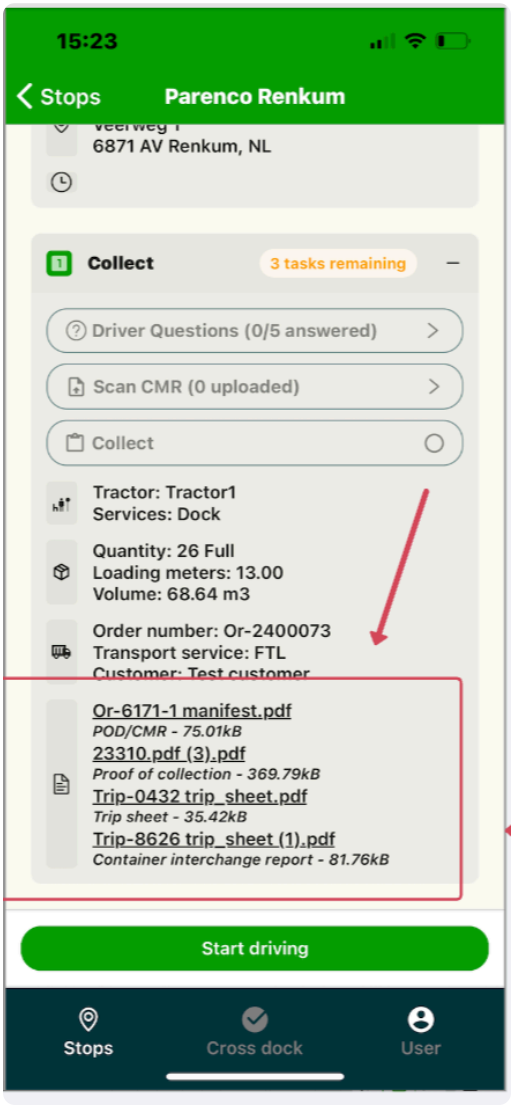

- Navigate to **Configuration > Documents**.
- Select the **"Driver mobile app"** option in the list view.

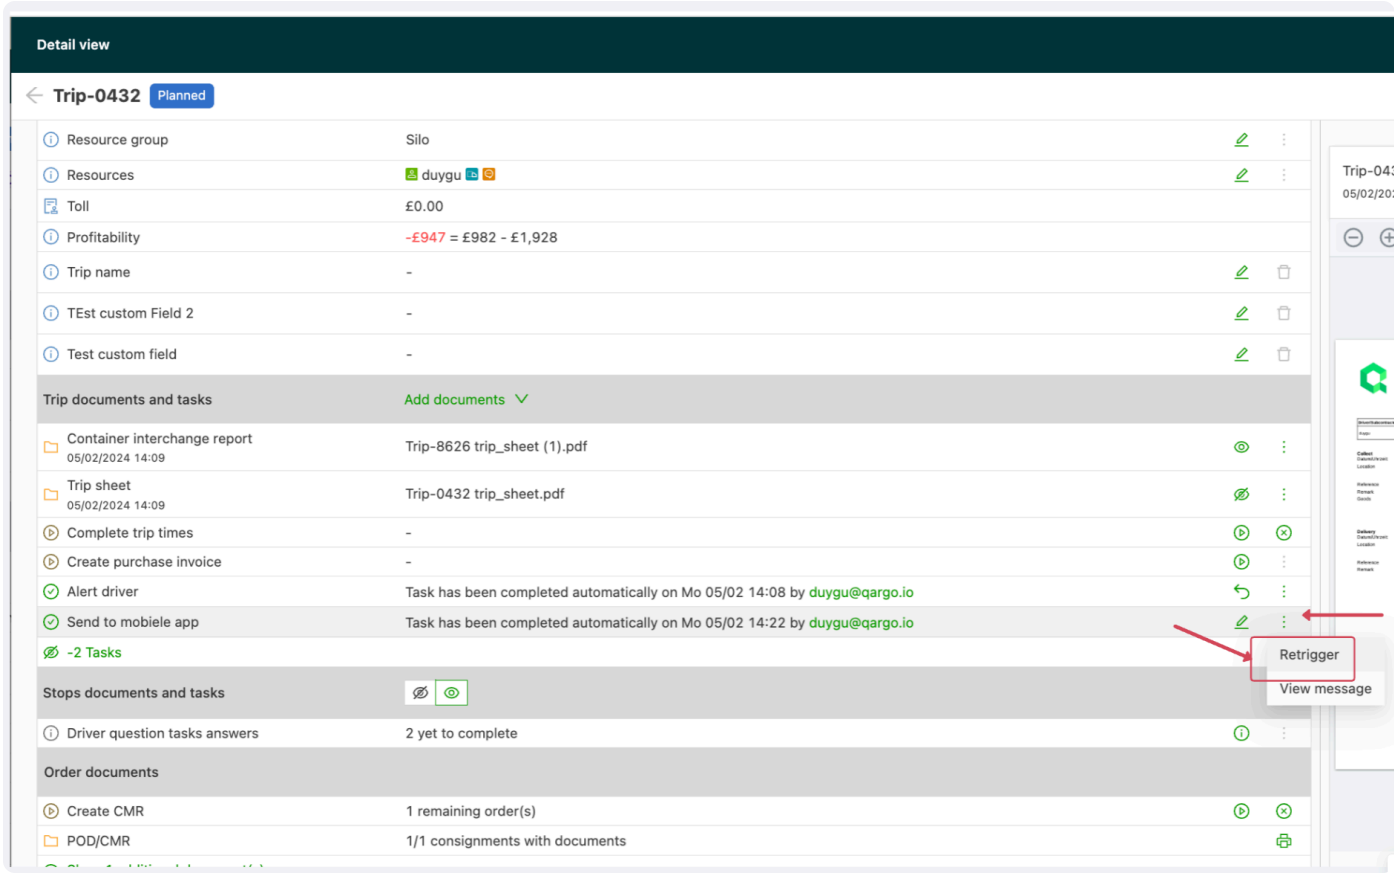

- Add the documents that should be visible to drivers in their apps.
- Save the changes.

- Drivers can then view the related documents in their mobile apps if any have been uploaded to the order/load or the resource page.

Attention: If the above changes are made after the load has been dispatched, the task needs to be retriggered for these changes/documents to be visible in the driver mobile app.
