Add a resource combination

Updated October 24, 2024

A combination can be added in Resources. For example, if a driver always drives the same truck, add that combination. That way, the driver and truck don't have to be combined manually each time a load is planned.

- Navigate to **Resources**
- Click **Combinations** in the header.
- Click **Add combination**.
- Complete the required fields.
- Save the combination.
