Trailer planning

Updated February 6, 2025

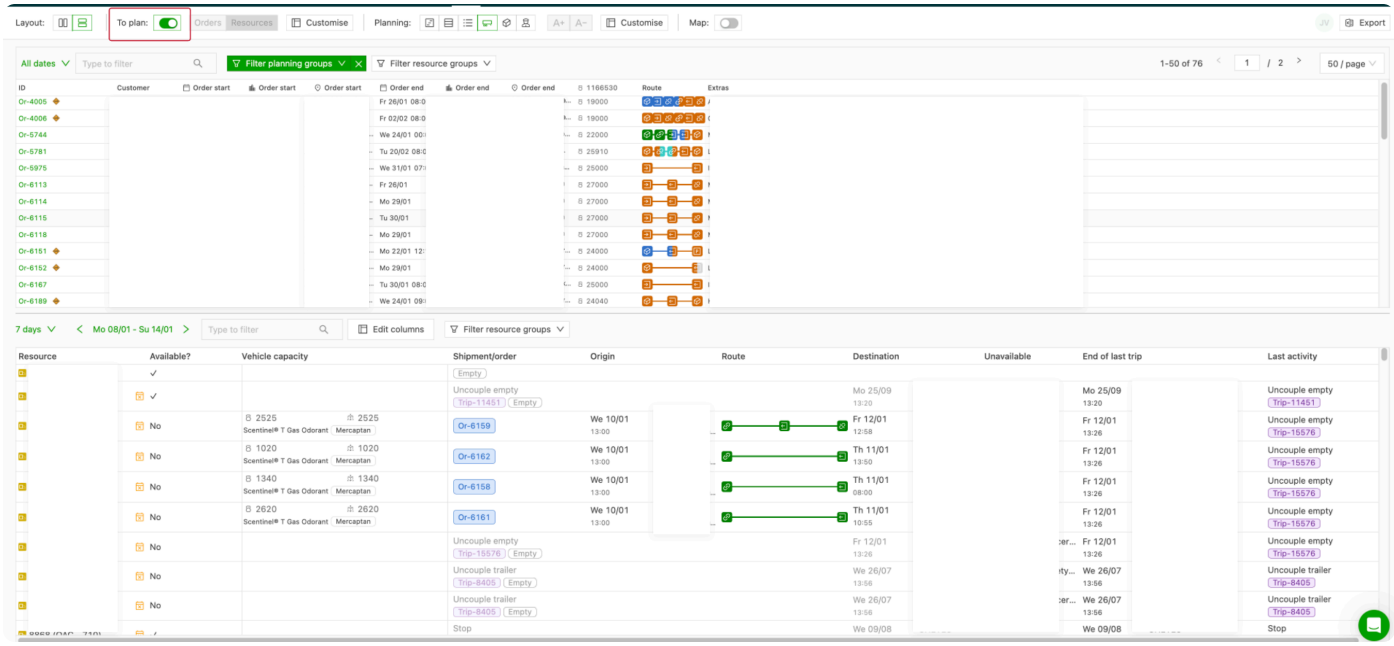

Use case of this option: tracking the last location, goods and load of a trailer for planning purposes.

To see this option, turn on the toggle for trailers in the customize options of the planning:

In this view, the orders at the top are the ones that don't have a trailer assigned yet. Toggle off the "to plan" selection to enlarge the view for trailer tracking.
Below that is the list of trailers and their status in the system for the date or date range selected in the planning:

This view shows information such as **last product details, last activity of the trailer, the availability of the trailer, the route, location addresses and vehicle capacity.** To narrow down the search, apply filters in each column, customize the view or use the search field.
