Pallet network routing & Gazetteer

Updated November 8, 2024

The “Gazetteer” is a term often used for the Palletforce ZIP code manager. It is implemented as part of the globally managed Palletforce pallet network, so it is available out of the box when creating the transport network.

> Palletforce will **not** provide a gazetteer to TMS systems. It’s only provided at the terminal level. This requires the terminal to configure its own pickup zones and internal terminal, and a catch for all other zones.
