Pallet types

Updated April 27, 2026

Palletforce has a selection of pallet types. In Qargo, these are modeled as packaging types of the type `PalletforcePallet`.

The following table lists the different types of Palletforce pallets and the codes they should have in Qargo.

Pallet type Palletforce	Qargo code
Full	F
Quarter	Q
Half	H
Oversize	O

Pallet Definitions

Pallet types can be mixed within a consignment. The following heights and weights determine the type of pallet:

Pallet Type	Maximum Height	Maximum Weight
Full	2.44m	1250kg
Half	2.0m	500kg
Quarter	1.0m	250kg

The height and weight limits for each pallet type are used on an either/or basis. For example, a pallet with a height of 1.5m would normally be considered a Half pallet if it weighed less than 500kg. However, if the 1.5m high pallet weighed 750kg, it would be considered a Full pallet. i.e. exceeding either the height *or* weight of a pallet type moves the pallet up to the next type.

A pallet measuring over 2.44m high *or* weighing more than 1250kg is an "Oversized" pallet.

Pallets over 2m high must specify the pallet dimensions in one of the Notes fields (Fields 32, 33, 34, 35) to ensure proper handling arrangements are made. **Palletforce must be notified of all pallets over 2m high and/or over 1250kg in weight.**
