PN - Palletline - Pallet types

Draft article - pallet type definitions for Palletline network

Updated December 4, 2024

Default Palletline pallet types

Palletline has 4 default pallet types:

Code	Description
Full	Full pallet
Half	Half pallet
Quarter	Quarter pallet
Micro	Micro pallet

(See the configuration page: **Add a packaging type in Configuration)**

Do **not** change the codes of the preconfigured packaging types for Palletline.

\

Oversized pallets {#h_d6033c4501}

Some Qargo customers also allow their own customers to book “oversized” pallets. These pallets exceed the normal pallet dimensions, so they need to be booked as multiple pallet spaces (e.g., 2 or 3 spaces).

However, the Palletline API has no equivalent concept. For this reason, Qargo has introduced an extra code, “Oversized”, which is mapped to “Full” pallets during export so the API accepts them.

This mapping is only applied during export. Since there is no Palletline equivalent, these pallets never come in this way during import.

Multiple pallet types can be mapped to the “Oversized” code, e.g.:

Name	Code	Length (m)	Width (m)	Height (m)	Weight (kg)	Loading meter	Pallet spaces
Full	Full	1.2	1	2.2			1
2.4 M	Oversized						2
2.6 M	Oversized						3

(See the configuration page: **Add a packaging type in Configuration)**
