Resources: deactivate a driver

A resource can't be removed, but it can be deactivated by removing all its resource combinations and turning off "Always on planning board". If the Activate toggle is grayed out, one of the two conditions below is still open on the driver.

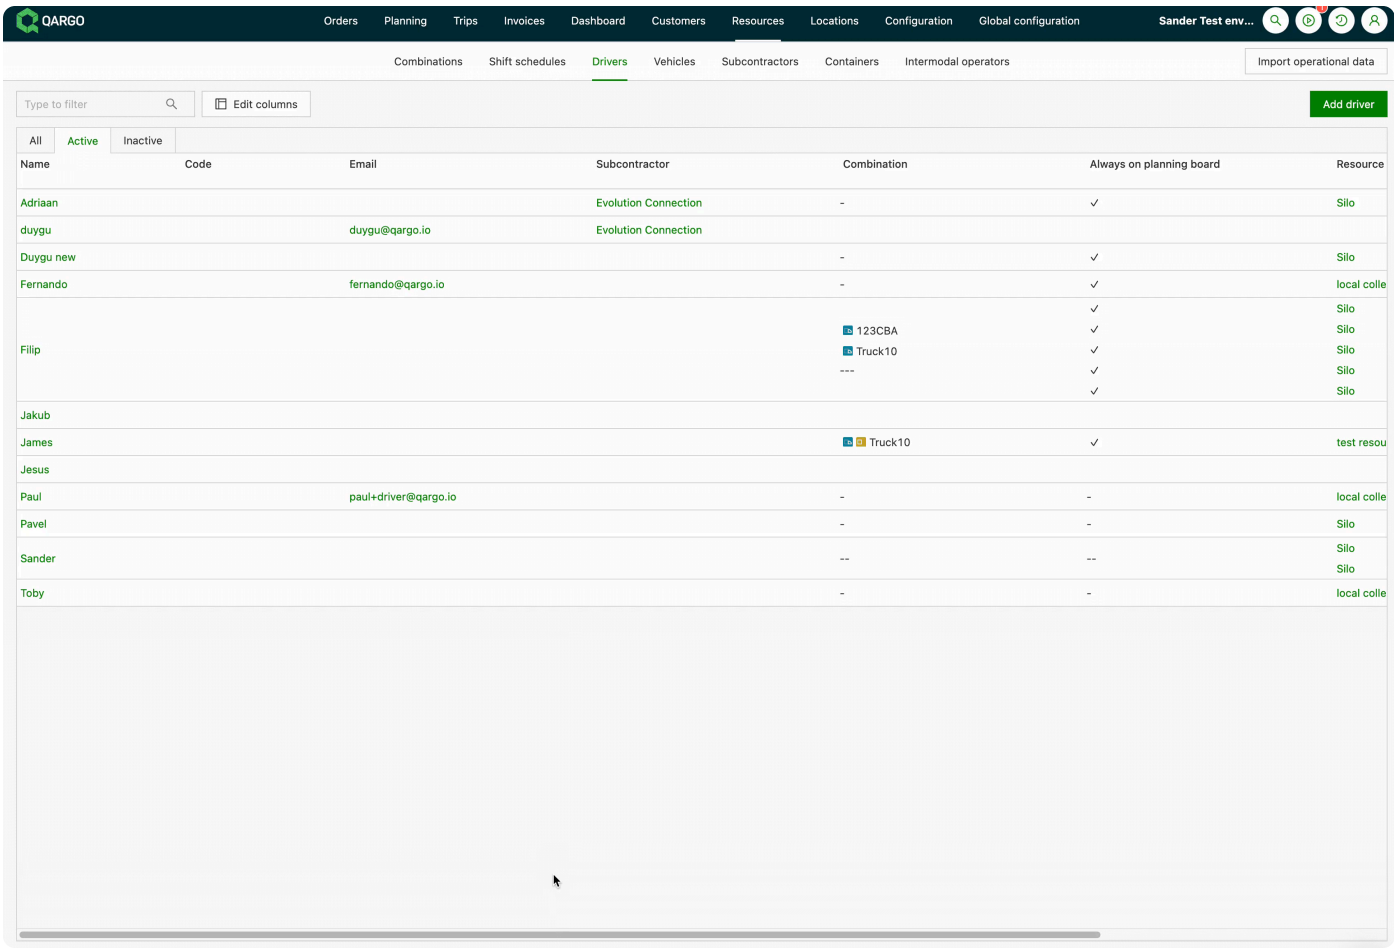

Updated October 15, 2026

Reminder of what needs to happen to be able to toggle the Activate button

To deactivate a resource, **two things** must be in place:

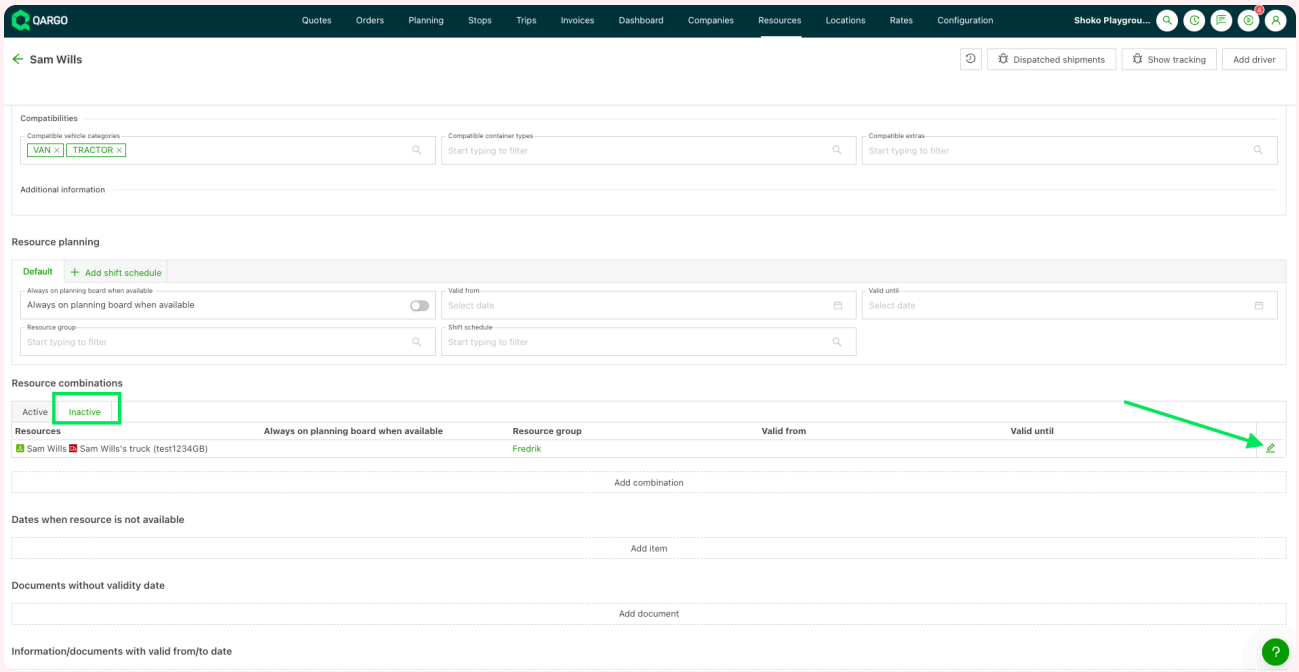

- Toggle off the **“Always on planning board”** option
- Remove any resource that is not the resource itself from the **“Combined resources”** field

Sometimes the resource combination is located under the **inactive** tab.
Navigate to the inactive combination and remove everything but the resource itself:

1. Turn off **Always on planning board when available**.
2. In **Combined resources**, remove everything except the driver.
3. Clear **Resource group**.
4. Clear **Shift schedule if one is set.**
5. Click **Save**.
