Export data from Qargo to import into the Amazon carrier portal

Updated May 13, 2025

Amazon carriers need to import the requested information into Amazon's Carrier Appointment Request Portal (CARP).

This data can be exported from the order list view in Qargo and then imported into the Amazon carrier portal.

1. Filter the orders to export.
2. Click the **CARP export** action under the **Export** dropdown.
3. A CSV export is generated.
