Costs assigned to orders

Updated October 24, 2024

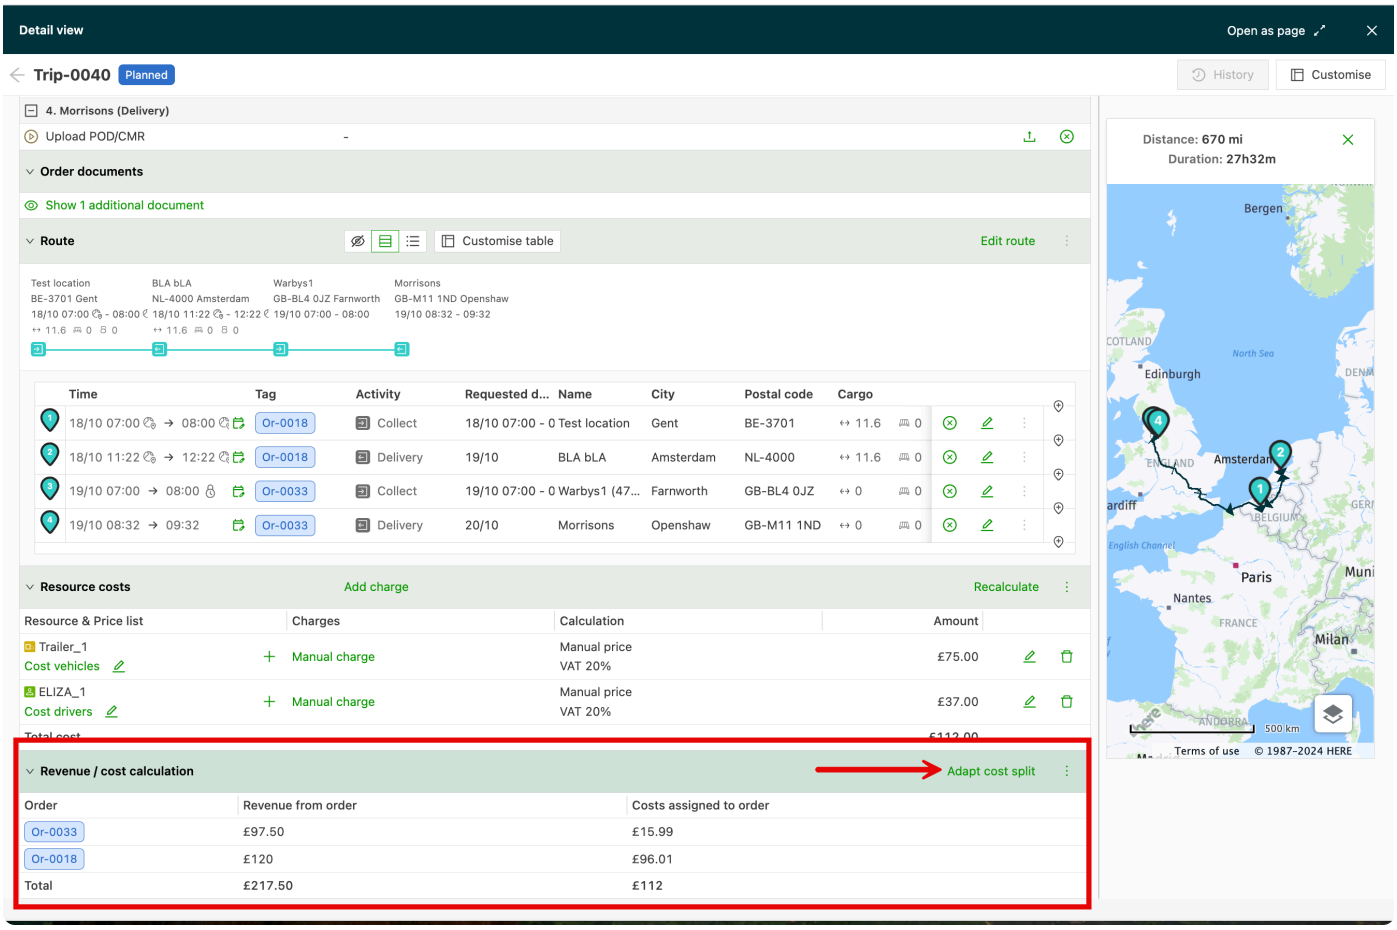

When a load contains multiple orders, Qargo automatically divides the total cost across all orders based on time or distance.

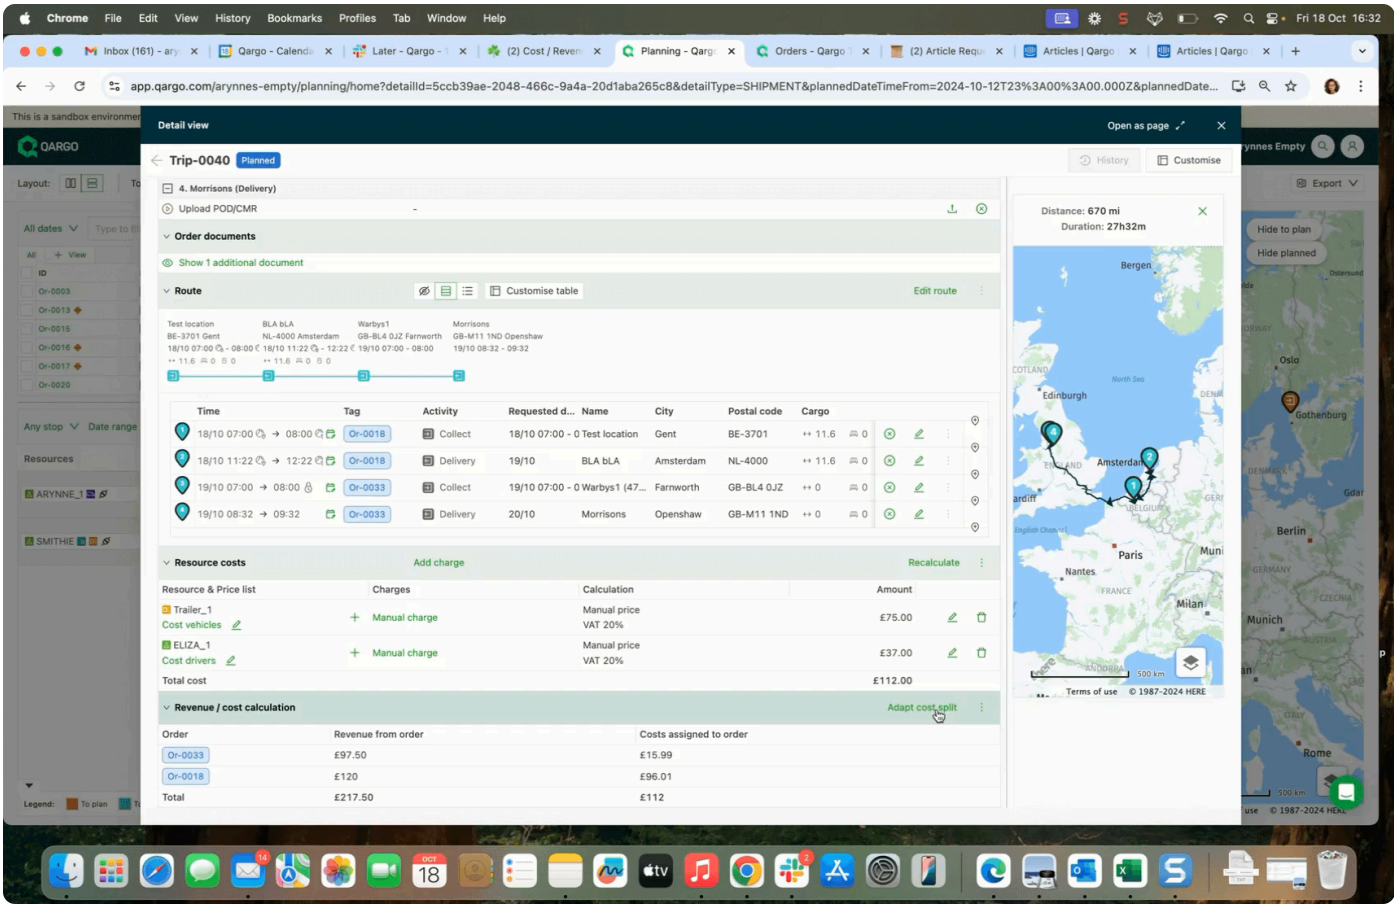

> To change the cost calculation from time to distance or vice versa, contact Qargo.

By default, the cost is assigned as a percentage of the total cost, but it is possible to overwrite this as a cost.

To overwrite how the cost is allocated to the orders, click **Adapt cost split**.
