Collapse sections in Qargo

This article shows how to update the order view to show only relevant details.

Updated November 20, 2024

Sections can be collapsed and expanded on different pages in Qargo:

- individual order page
- individual loads page
- individual invoice page (credit memo, invoice, carrier invoice)

By default, all sections are expanded for a complete view. However, if certain details are not essential, those sections can be collapsed with a single click.

Qargo remembers these preferences, so collapsed sections stay closed when navigating to different orders, loads or invoices. These sections also stay collapsed when navigating between different sections, for example between orders and planning.
