Stop activity configuration for resources

This article describes new stop activity options that can be configured to help manage empty trailer moves and intermodal operations.

Updated November 4, 2024

The application now has better support for trailer/chassis and start/end of day activities. Users can select from a new set of actions in the order input screen to create a more accurate workflow for orders. The new actions in the order input are:

- Start/end of day
- Drop/hook empty trailer
- Drop/hook empty chassis

All of these are available for ***Goods*** and ***Owned container*** transportation services. All of the new actions can be split to add parking or intermodal.

Transportation service / action	Stop activity	Description
Goods	Pickup	Picking up an order/shipment from a designated location
Goods	Delivery	Delivery of an order/shipment to a designated location
Goods	Hook trailer	Pick up a new trailer from a designated location
