▶ **Week 2**

Importing invoices to accounts

Rates: Freight item – dimension-based rating

There is a new option to configure rating based on the *unit dimension* of freight items. This can be helpful when separate rating is needed for oversized items or pallets. This rating method looks specifically at each freight item rather than at the order, the packaging type, etc.

Predefined package sizes must be set up in **Order input > Packaging types** for this to work.
