Feature release April 2025

This article highlights the new features and enhancements released by Qargo this month.

Updated February 20, 2026

Week 1

Intermodal: Improved visibility of operational status
Planning: “Next order” planning suggestions.

Week 2

User settings and permissions in user roles
CO2 calculations now available on documents

Week 3

Configure invalid service level notification

Week 4

Planning: Improved mapping tools
Configuration: New user roles
Orders: Planning preference for multiple shipments

▶ **Week 1**

▶ **Week 2**

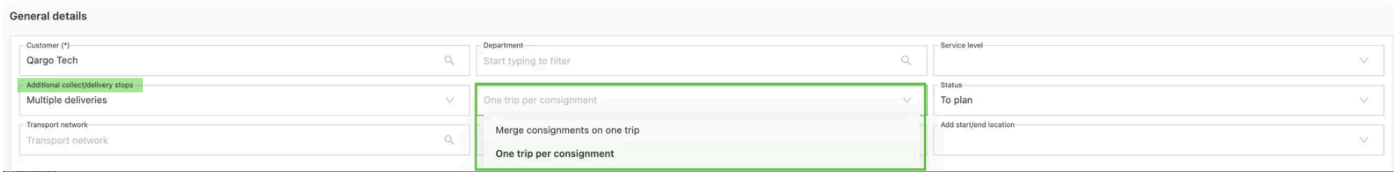

▶ **Week 3**

▶ **Week 4**

User roles: Permission and visibility

Orders: Planning preference for multiple shipments.

When building an order that includes multiple shipments (pickups and/or deliveries), it is now possible to specify a planning preference. Options include merging all shipments onto one load or creating a single load per shipment.

The link below explains how to build orders with multiple shipments.

Add extra shipments to an order
