Intermodal: create an intermodal operator in Resources

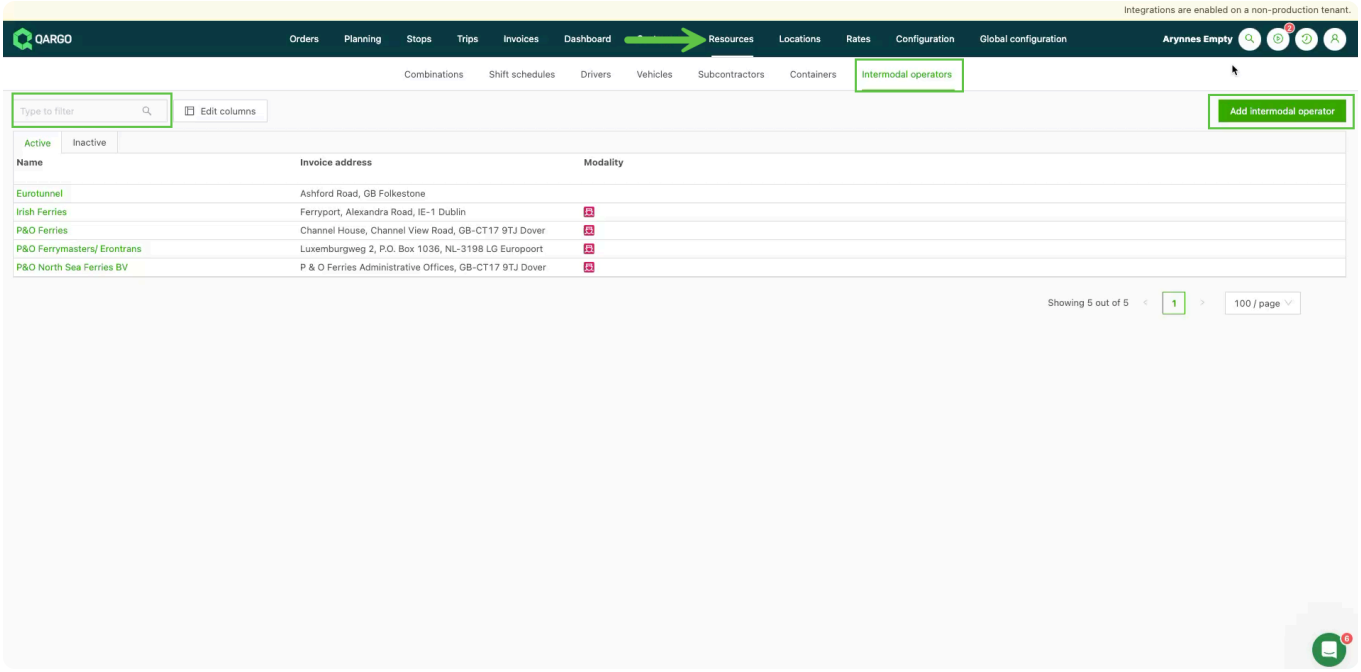

Learn how to add intermodal operators in the Resources menu: search existing operators, add new ones, and save timetables.

Updated April 4, 2025

Adding an intermodal operator

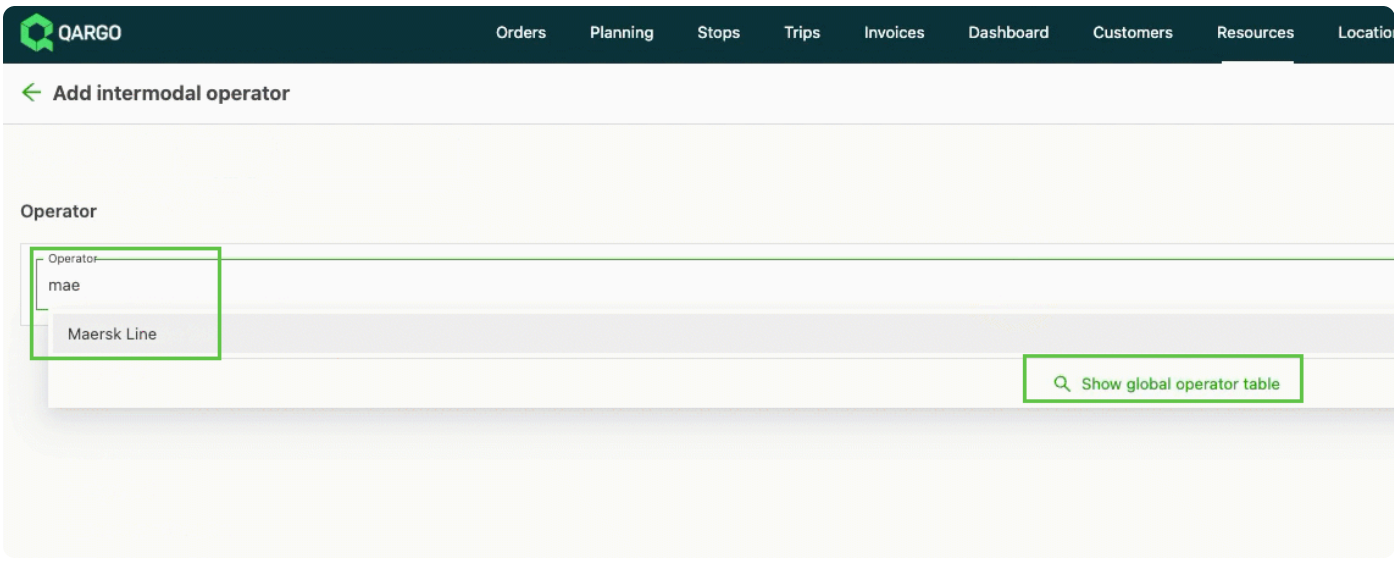

Intermodal operators are added in Resources.

- Go to **Resources > Intermodal operators**.
- Use the search field, if needed, to find an existing operator.
- Click **Add intermodal operator** if the operator is not on the list and needs to be added.

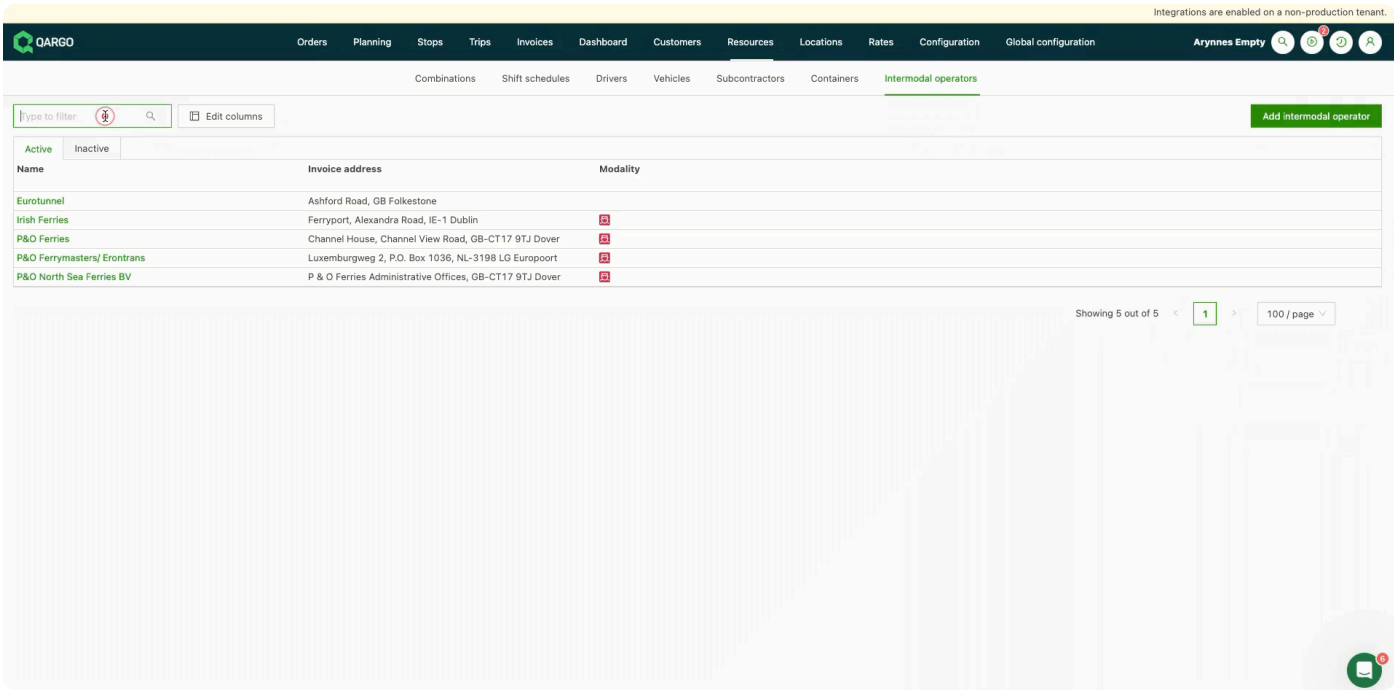

Contact support if the intermodal operator cannot be found in the list of operators.

In the **Operator** field, start typing the name of the company to add. If it is available, it appears in the dropdown and can be selected. If no suggestions appear, click **Search global operator table** to search further.

- If details such as the name and address are available, they are filled in automatically.
- Check the details that are filled in, and complete any additional fields, such as the tax number.
- Click **Save**.

The record now appears in the Intermodal operators list. To add more details, such as timetables, click the operator and complete any further information.
