Rate card: Price based on mileage

This video walks through setting up a price list that calculates over a distance and uses variables through conditions.

Updated November 26, 2025

This video looks at how to build a price list using the order distance. The price list uses fixed rates based on set mileage tiers, up to a threshold mileage limit (e.g., 500 miles). Once the order reaches the threshold limit, a per-mile rate applies to the order instead.
