Adding incidents to an order

Orders: Contract carrier quotes

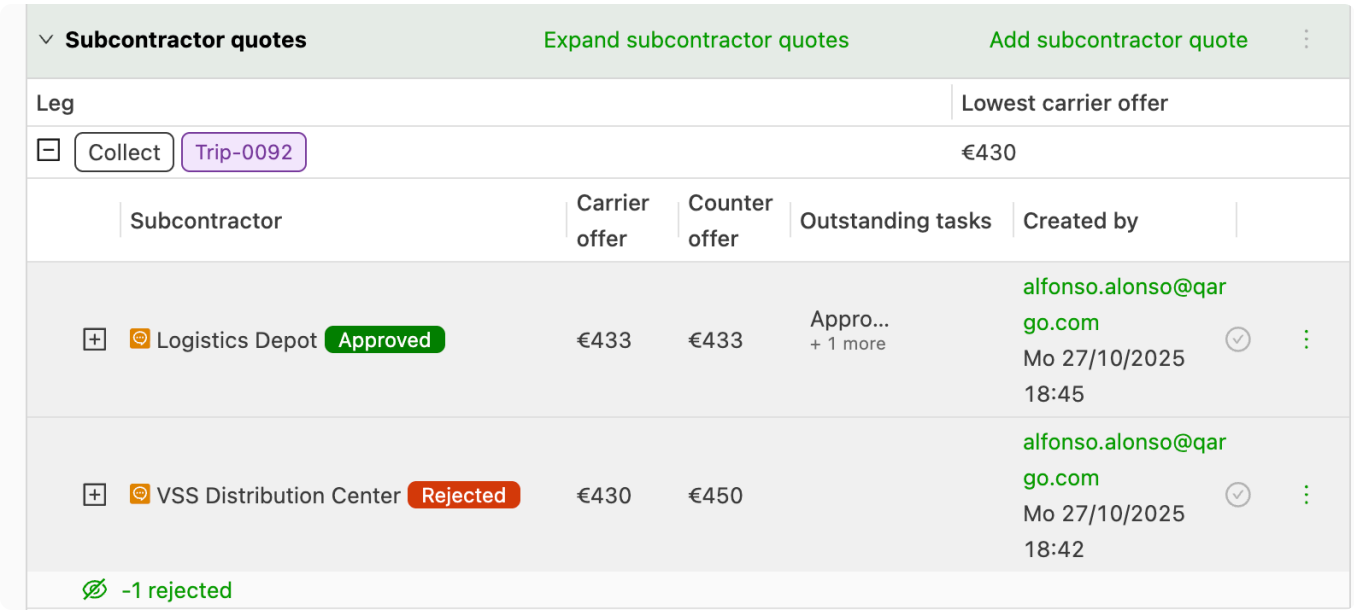

The new **Contract carrier bidding** functionality centralizes the process of sourcing and managing contract carrier bids. It moves bid tracking out of external email chains and directly into the transport workflow. This feature enhances operational efficiency by automating the critical steps from quote approval to load operations.

🧩 What's included

- The **Order view** now includes a dedicated section for **Contract carrier quotes**. This section makes it possible to log multiple contract carrier **offers** and **counter-offers** against a specific order leg.

- Quotes are tracked with a status of 'To request', 'Rejected', or 'Approved'.
- Workflow automation is triggered upon approval: the system automatically **creates a load**, **assigns the contract carrier** as the resource, and **rejects all other competing quotes** for that order leg.

- An optional **approval flow** can be configured via **Configuration > Tasks > Loads**.
- A new column has been added to the **Planning module**. It helps quickly identify orders with outstanding quotes and provides a quick option to **Accept or reject** bids directly from the planning table.

🔍 Limitations

- A centralized table or overview of all outstanding bids and contract carrier quotes is not available yet.
- The platform currently allows manual planning of orders that have outstanding quotes. In such cases, the system does not display warnings or alerts.

📌 Customer impact

- Centralized and streamlined management of the entire bidding process.
- Significant reduction in manual administrative effort and email tracking.
- Increased control and speed in converting an approved quote into a confirmed, planned load.
