FAQ: Filtering for tomorrow/yesterday

This article explains how to use the enhanced date filters to display items scheduled for tomorrow or yesterday in any list view.

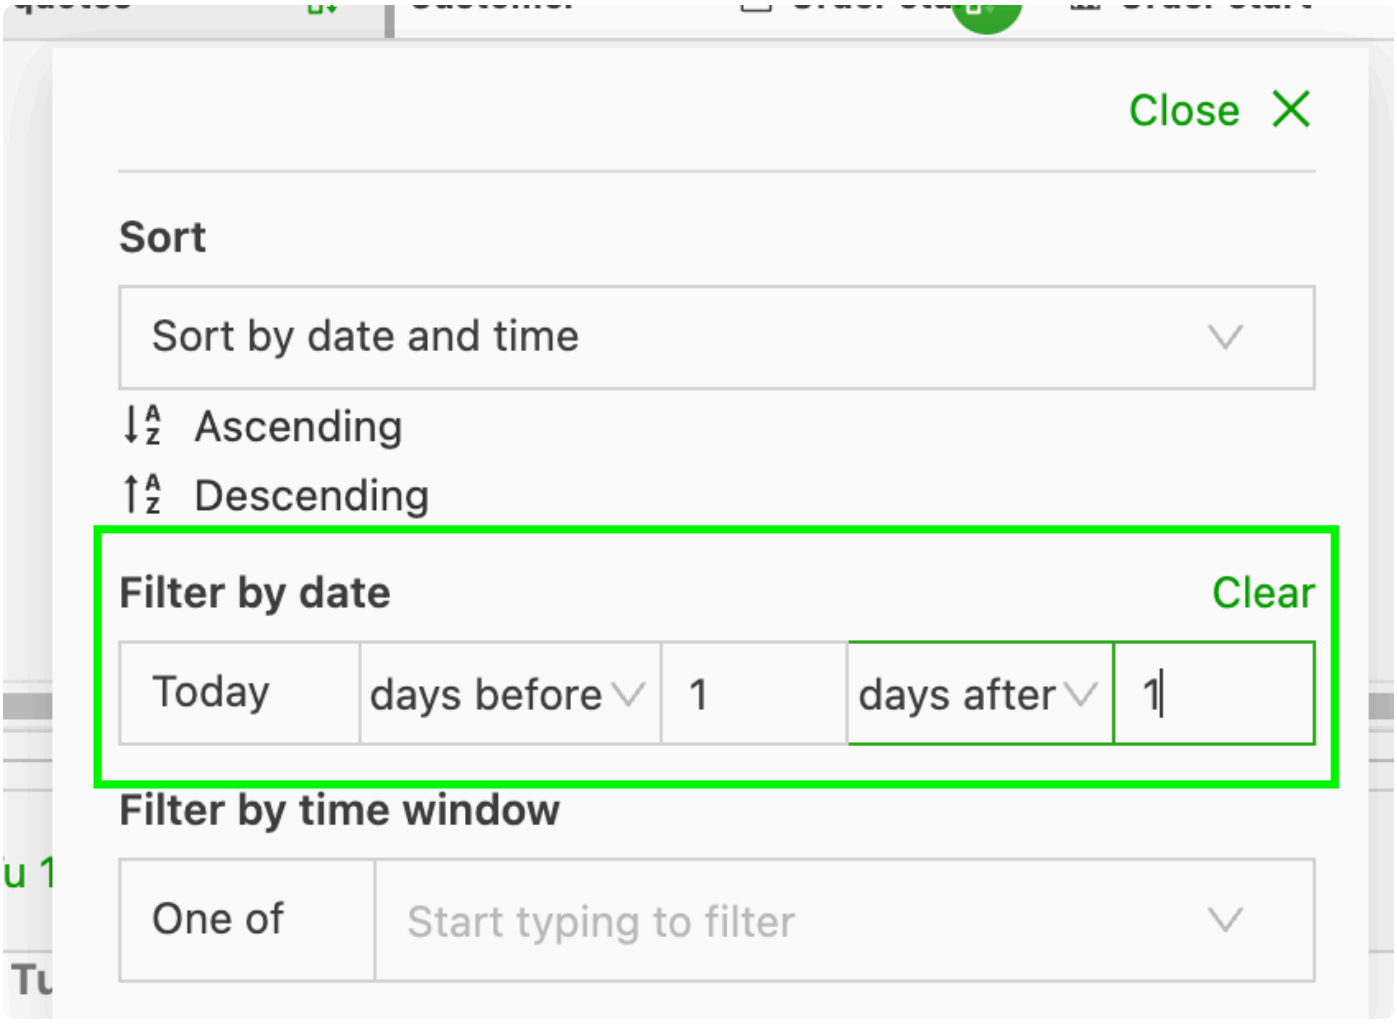

Updated February 20, 2026

Q: How to create a list view that strictly shows orders or activities scheduled only for tomorrow (excluding today)?

A: Precise views for 'tomorrow' or 'yesterday' can now be created with the enhanced relative date filters. These filters are available in all columns with a date filter.

Previously, filters like "days after 1" still included today's items. Now, the target day can be specified directly:

- **For tomorrow:** Use the date filter and specify a range such as **'days after 1'** to start the filter. Then select a range of **'days 1'** to strictly limit the view to the following day.
- **For yesterday:** Similarly, set the filter to show only items from **'yesterday'** for quick daily reviews.

This enhancement keeps planning views highly accurate and focused on the tasks immediately ahead or just completed.
