Video: how to mark unused intermodal legs as ignored

In Qargo, every intermodal order generates a fixed three-leg structure, but not every leg always needs to be executed. The Ignored status lets planners mark unused legs as Do not plan, removing them from the active route without deleting them.

Updated June 16, 2026

This video explains how legs where the **start and end location are the same** can be marked as ignored:

For repeat flows, such as terminal-to-terminal empty repositioning, this can also be set up on **order templates**, so the leg starts as excluded on every order created from that template.

More information about intermodal planning is available in this article.
