Video: How to use 'To plan: Loads' mode

The 'To plan: Loads' option in the planning board To plan dropdown lists every load that's still waiting for a real resource: both loads parked on a dummy resource and loads with no resource at all, gathered in one place.

Qargo supports two ways to create a load with a date/time but no real resource assigned yet:

1. **Plan a new load and skip the resource (leave it empty)**
    1. In the planning board, select an order > click **Create new load** > **Merge** the load with a date and hour only.
    2. **Save** the load.
2. **Preplanning with dummy resources**
    1. Go to **Resources** > add a new driver/vehicle > toggle **Dummy resource** on.
    2. On the planning board, filter to show **Only dummies** (or **All resources**).
    3. **Add orders** to the dummy resource.
