Video – revenue split exceptions for loads

Operators running multi-leg orders had no way to configure different revenue splits based on who handled each leg. Now a single exception rule can be added in the transportation service configuration to set this up.

Updated June 22, 2026

This video explains how to add revenue exceptions at the load level:

🔁 Once this has been set up, the exception is automatically applied to any new order using this transportation service. To apply the **new split to an existing order**, **recalculate prices manually** on that order.

Find out more about this feature and transportation services in general here: Configuration – Transportation services.
