Video: Assign the previous container or trailer to orders on a load

When planners added a reload to a load that already had a container on the delivery leg, that container didn't carry across. The only option was to open each order separately. Now, the previous container or trailer can be assigned in one go.

Updated June 25, 2026

This video explains how to assign the previous container or trailer within loads and to the next planned loads:

👀 Note that these buttons only work when:

- The order immediately before it already has a container or trailer allocated at the order level
- The current order doesn't have a container or trailer allocated yet.

So if the buttons can't be clicked, check those two things first.

Read all about it in this article: Planning: Container planning.
