Video – tap mode for cross dock

The cross-dock mobile app supports a tap-based mode that replaces barcode scanning with tap confirmations. Operators select a load, see a full pallet list, and tap each pallet or package to confirm movements. The same tracking statuses are triggered as with a scan.

Updated June 26, 2026

This video shows how to process goods using tap-based mode in the mobile app:

🧰 **Tap mode requires activation by Qargo**. It can be enabled per tenant or per terminal. Contact a Qargo Account Manager or Qargo Support to configure this.

Read all about it here: Qargo mobile app – cross dock “tap” mode (no scanning).
