Video: How to add a stop to a load from the open load detail?

The open load detail popover on the planning board is now interactive. With one or more orders selected in the To plan list, planners can click directly on the route (Table or Blocks view) to insert and save.

‼️ Adding stops from the route is **click only**: drag and drop is out of scope. This interaction adds stops to a load rather than reordering existing stops. Reordering stops still happens in edit route mode.

🧰 If the load detail is opened in a **separate browser tab**, a selection made earlier might not show up until those orders are reselected in the To plan list.
